     

          

          

    

        

      

    # **APPENDIX E** Limitations

### LIMITATIONS

This Document has been provided by Golder Associates Pty Ltd ("Golder") subject to the following limitations:

This Document has been prepared for the particular purpose outlined in Golder's proposal and no responsibility is accepted for the use of this Document, in whole or in part, in other contexts or for any other purpose.

The scope and the period of Golder's Services are as described in Golder's proposal, and are subject to restrictions and limitations. Golder did not perform a complete assessment of all possible conditions or circumstances that may exist at the site referenced in the Document. If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Golder in regards to it.

Conditions may exist which were undetectable given the limited nature of the enquiry Golder was retained to undertake with respect to the site. Variations in conditions may occur between investigatory locations, and there may be special conditions pertaining to the site which have not been revealed by the investigation and which have not therefore been taken into account in the Document. Accordingly, additional studies and actions may be required.

In addition, it is recognised that the passage of time affects the information and assessment provided in this Document. Golder's opinions are based upon information that existed at the time of the production of the Document. It is understood that the Services provided allowed Golder to form no more than an opinion of the actual conditions of the site at the time the site was visited and cannot be used to assess the effect of any subsequent changes in the quality of the site, or its surroundings, or any laws or regulations.

Any assessments made in this Document are based on the conditions indicated from published sources and the investigation described. No warranty is included, either express or implied, that the actual conditions will conform exactly to the assessments contained in this Document.

Where data supplied by the client or other external sources, including previous site investigation data, have been used, it has been assumed that the information is correct unless otherwise stated. No responsibility is accepted by Golder for incomplete or inaccurate data supplied by others.

Golder may have retained subconsultants affiliated with Golder to provide Services for the benefit of Golder. To the maximum extent allowed by law, the Client acknowledges and agrees it will not have any direct legal recourse to, and waives any claim, demand, or cause of action against, Golder's affiliated companies, and their employees, officers and directors.

This Document is provided for sole use by the Client and is confidential to it and its professional advisers. No responsibility whatsoever for the contents of this Document will be accepted to any person other than the Client. Any use which a third party makes of this Document, or any reliance on or decisions to be made based on it, is the responsibility of such third parties. Golder accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this Document.

PROJECT: Whytes Gully New Cell Design, Preliminary (50%) Design Review

Dear Dr. Schmertmann,

During the past three months, I performed a review of the design as it was progressing, and I gave my comments. I believe this interactive approach is far more effective than reviewing a voluminous report at the last minute. Indeed, an interactive approach can prevent expenditure of effort on inappropriate design options and streamlines the final review process.

My involvement in the review began in September 2011 when I visited the Whytes Gully site and participated in a project design workshop with the design team. I was provided with draft sections of the design as soon as January 2012. Furthermore, considering the importance of the project and knowing that your team was working diligently, I took advantage of being in New Zealand in January to spend four days in Sydney with your team. I must say that this interactive review was productive, because I have noted in reviewing the documents I have received from you since March 2012 that all of the comments I had made during these intensive four days in Sydney had been implemented or had been used to improve drawings, refine analyses and clarify descriptions.

As a result, in the final stage of my review of the 50% design, I have only minor suggestions, which do not affect my review conclusions.

This letter summarizes my review of the 50% design.

### Documents used for the preliminary (50%) design review

To perform my review, I was provided with the Report for Preliminary Design, dated April 2012. In fact, I received various sections of this report as soon as March 2012, as they became available, which was helpful.

I was also provided with the Appendices A, B and C to the Report for Preliminary Design: Appendix A, Drawings; Appendix B, Technical Specifications; and Appendix C, Geotechnical Interpretation and Analyses.

### **Review of the Report for Preliminary Design**

In reviewing the Report for Preliminary Design, I noted the following:

- The Report is well written and well organized.
- Key issues are properly identified. For example, the decision regarding including the piggyback lining system in the eastern gully is appropriate and I completely agree with this decision.
- The technical issues related to the piggyback lining system have been properly identified, namely: impact on leachate, impact on landfill gas, impact of settlement on the piggyback lining system, etc.
- The piggyback design issues have been addressed using state-of-the-art methods, as discussed later in this letter.
- The regulatory aspects are adequately addressed. I fully agree with the decision of following the Victoria BPEM guidelines for landfill lining, which are consistent with international regulations and practice. In particular, the composite liner concept is clearly presented and adequately used.
- Great attention has been paid to design details. This is important, because, in the disciplines of waterproofing and drainage, one detail that is incorrect from a conceptual or constructability standpoint may have detrimental consequences.

In conclusion, the Report for Preliminary Design is satisfactory. In fact, in my opinion, it contains more details than normally needed at the 50% design stage. This is beneficial as it will certainly facilitate the preparation of the 90% design.

### **Review of Appendix A, Drawings**

I reviewed three successive sets of Drawings, starting in mid-January. During my visit in January, I made numerous comments and recommendations to improve the clarity of the drawings and the consistency between the different drawings. I also made important technical comments on design details such as connections between different drainage materials. My general evaluation of the drawings is that the final set of drawings I reviewed has appropriate technical content and contains all the drawings needed for a 50% design.

### **Review of Appendix B, Technical Specification**

I did not review in detail Appendix B, Technical Specification. However, I reviewed Chapter 2, the material property requirements, and Chapter 3, the requirements for construction activities and construction quality management.

In reviewing the material property requirements (i.e. Chapter 2), I made sure that the specifications were consistent with international practice. It is important to note that that the scope of the technical specification at the 50% design stage is necessarily limited because some

properties cannot be specified before the 90% design is completed. This is the case in particular of the drainage geocomposite material.

Regarding the requirements for construction activities and construction quality management (i.e. Chapter 3), my evaluation is that key items such as geomembrane installation, testing and documentation (items which were examined during the course of the review) have been adequately considered for this stage of the design.

In conclusion, Appendix B addresses all the materials that need to be specified and the important aspects of construction and construction quality that need to be addressed at the 50% design stage. However, more work is needed to finalize this appendix at the 90% design stage.

### **Review of Appendix C, Geotechnical Interpretation and Analyses**

I did not review in detail all parts of Appendix C, Geotechnical Interpretation and Analyses. However, during the course of the interactive review process, I reviewed key items such as settlement analysis, piggyback liner deformation analysis/geogrid design and landfill slope stability. I discussed my comments with the design team. The comments were used to improve the analyses and my evaluation is that these comments have been adequately considered.

I was particularly interested in the "Deformation Analysis Results" section because it is essential to the piggy-back design, and because state-of-the-art methodology used. This is due in great part to the fact that you are very knowledgeable about all important publications on the subject of deformation analysis, as I could see during our discussions in January.

I noted that Appendix C does not contain a section on liquid control/drainage design. I indicated to the design team that I agree that such a section is not required at this stage, because it is more appropriate to do the drainage design last (i.e. after settlement and deformation analyses). A section on drainage design will need to be added at the 90% design stage. In the meantime, I noted that the leachate collection drainage length shown in the 50% design drawings is reasonable and no drastic change should be needed as a result of the calculations to be performed for the 90% design.

In conclusion, my evaluation is that Appendix C addresses all the issues that need to be considered at the 50% design stage. In particular, important issues such as slope stability, settlement and liner deformation are addressed thoroughly. Furthermore, Appendix C contains all of the numerical results needed at the 50% design stage.

### General evaluation of the design

In the process of my review, I made numerous comments on non-technical points (e.g. terminology, consistency, clarity of explanations) to make sure the work product would be

presented in a manner that is well accepted by landfill experts and would be informative for nonexpert readers.

It is important to note that, while making non-technical comments, I was not distracted from my essential mission which is to ensure that the landfill cell design is technically sound. From this viewpoint, my impression is very positive and can be summarized as follows:

- The set of drawings contains all the drawings needed for a 50% design and the drawings are presented in a clear and consistent manner. Technical details in the drawings are adequate.
- The geotechnical design report will address all design aspects when a section on liquid control/drainage design is added at the 90% design stage.
- The methodology used for all aspects of design relevant to the 50% design (i.e. stability, settlement, and deformation) is correct, and the analyses are performed with advanced analytical and numerical tools and an excellent knowledge of the state of the art.

This last comment is perhaps my most important comment on the review I performed of the 50% design.

### Conclusion

Based on this review, I can state that the 50% design is satisfactory. All the important issues have been identified. All the design methods used are correct and are implemented with the latest published information available and advanced analytical and numerical tools, particularly for the piggyback lining system. My experience indicates that the design is consistent with international practice and is likely to be adequate from a regulatory standpoint.

In my opinion and based on my experience, the degree of detail in the design report and in the numerical analyses exceeds what is typically expected for a 50% design.

I am very pleased that the interactive approach to design review, as we have practiced since January, has been fruitful. As a result, I have no suggestion for changes.

I thank you for the opportunity that was given to me to review this excellent work.

Sincerely,

J.P. Giroud

#### WHYTES GULLY NEW LANDFILL CELL – BASELINE DATA ASSESSMENT REPORT

#### 1.0 INTRODUCTION

A Report titled "*Whytes Gully Hydrogeological Investigation*" has been prepared by Golder Associates Pty Ltd (Golder) (March 2012) on behalf of Wollongong City Council (Council) following completion of a combined hydrogeological and geotechnical investigation at the Whytes Gully Resource Recovery Park (WGRRP) in July and August 2011. In the Report, groundwater monitoring of 21 existing monitoring wells (GMW01, GMW103–GMW106, GMW108S/D, GMW109S/D, GMW110–GMW111, GABH01-03, GABH06S/D and BH6) has been proposed to provide a baseline dataset of local groundwater quality.

The objective of this data review is to optimise the current monitoring program for the site following the completion of an annual quarterly monitoring cycle.

In addition to evaluating the baseline monitoring data as a whole, the following specific issues were addressed, which were raised by Council during review of the hydrogeological investigation report:

- A low reported ammonia concentration (0.69 mg/L) in a leachate sample, December 2011.
- A low reported value of electrical conductivity (EC; 0.1 µS/cm) in surface water samples from on-site ponds in a flora and fauna assessment by Biosis (Report Reference No. 12379, March, 2012). The reported value was based on values recorded on-site by Golder on 18 July 2011.
- Elevated concentrations of nutrients (ammonia, TKN, TOC) and manganese in monitoring well GMW109S.

These items are addressed in the recommendations section of this technical memorandum.

#### 2.0 HISTORICAL MONITORING EVENTS

A total of five baseline monitoring events (i.e. August 2011, December 2011, January 2012, May 2012 and August 2012) were performed at all proposed sampling locations, except the following:

 GMW101, GMW106, GMW107, GABH04 and GABH05 were only sampled during the August 2011 monitoring event.

All wells on-site were sampled in August 2011 by Golder following installation. Since then ALS Laboratory has collected groundwater samples. The programme excludes wells that have been dry since installation (GMW101 and GMW107) and others that were considered to be adequately covered by other wells for the purposes of routine monitoring (GMW106, GABH04 and GABH05);

GMW102 has been dry since December 2011, therefore, no groundwater sample was collected; and

GABH01 was unable to be sampled during the August 2012 monitoring event due to access issues.

In addition, surface water samples were collected along the Dapto Creek and and leachate samples were collected from the influent sump adjacent to the leachate ponds, in conjunction with the groundwater monitoring events since December 2011.

Historical groundwater, surface water and leachate results are presented in the attached **Tables 1 & 2**, respectively.

#### 2.1 Summary of Historical Groundwater Analytical Results

The historical groundwater sampling results (attached **Table 1**) have indicated that:

- In general, nitrate (only analysed in the August 2011 monitoring event) and nitrite concentrations were either low or below the laboratory limits of reporting (LORs) across the site.
- Ammonia, total Kjeldahl nitrogen (TKN), total organic carbon (TOC) and biochemical oxygen demand (BOD) concentrations were generally low or below the laboratory LOR across the site, with the following exceptions:
  - Elevated ammonia, TKN, and TOC concentrations were consistently reported for well GMW109S, with the reported ammonia concentrations exceeding the adopted assessment criterion; and
  - Elevated TKN and TOC concentrations were reported for GMW101 in the August 2011 monitoring round. This well was not sampled in the subsequent monitoring events as it was typically dry, therefore, the result could not be re-evaluated.
  - Elevated TKN concentrations were reported for GMW108D, GMW111, GABH02, GABH03 and BH6 during the January 2012 monitoring round, TKN concentrations were below or close to the laboratory LOR at these locations for the rest of the baseline monitoring events, and thus far represent an one-off spike in the reported TKN concentrations.
- Metals including aluminium (AI), copper (Cu), lead (Pb), and zinc (Zn) were reported at concentrations greater than the adopted assessment criteria at most locations in one or more monitoring events. In addition, the reported manganese (Mn) concentrations at location GMW109S were above the assessment criterion during all sampling events. Of note, samples for metal analysis were filtered during the August 2011 monitoring event and were unfiltered in the subsequent monitoring rounds. The adopted assessment criteria are based on dissolved (i.e. filtered) metal concentrations, and as such the unfiltered sample results may include a non-dissolved bias that is not directly applicable to the assessment criteria.
- The reported concentrations of the organic analytes were generally below the laboratory LORs across the site. However, total petroleum hydrocarbons (TPH) were reported at the following locations:
  - GMW110: C₁₅-C₂₈ fraction (430 μg/L) was reported during the August 2011 monitoring event. TPH was not reported at this location in any other baseline monitoring events.
  - GMW111: C₁₅-C₂₈ fraction (1,090 μg/L) and C₂₉ C₃₆ fraction (770 μg/L) were reported during the August 2011 monitoring event. TPH was not reported at this location in any other baseline monitoring events.
  - GMW105: C₁₅-C₂₈ fraction (170 µg/L) and C₂₉ C₃₆ fraction (80 µg/L) were reported during the January 2012 monitoring event. TPH was not reported at this location in any other baseline monitoring events.
  - GMW109S: C₁₅-C₂₈ fraction (360 and 210 µg/L) was reported during the January and August 2012 monitoring events, respectively. TPH was not reported at this location in any other baseline monitoring events.

GABH01: C₁₀-C₁₄ fraction (60 µg/L), C₁₅-C₂₈ fraction (560 µg/L) and C₂₉-C₃₆ fraction (260 µg/L) were reported during the January 2012 monitoring event. TPH was not reported at this location in any other baseline monitoring events.

Low reliability interim indicative working levels (IIWLs) provided in the ANZECC (2000) guidelines refer to a Trigger Value of 7  $\mu$ g/L. This is based on US EPA methodology, which is generally not used in deriving guideline values for Australian conditions. More importantly, the values are based on the toxicity to crustaceans from North-West Shelf crude oils. As such, the IIWL for TPH is not an appropriate guideline for assessing the effects of refined petroleum products in an urban environment freshwater ecosystem.

More recently, health screening levels (HSLs) for petroleum hydrocarbon compounds were introduced in the recently amended National Environment Protection (Assessment of Site Contamination) Measure (NEPM, 1999). The HSLs provide soil, groundwater and soil vapour guidelines to be used for the assessment of vapour intrusion potential from volatile components of petroleum hydrocarbon compounds, including benzene, toluene, ethylbenzene and xylenes (BTEX) and for two TPH fractions ( $C_6-C_{10}$ , and  $>C_{10}-C_{16}$ ). Only one TPH detection was in a carbon range approximating the HSL fractions (GABH01:  $C_{10}-C_{14}$  fraction (60 µg/L)), for which the most conservative appropriate criterion is "non-limiting" (i.e. the derived assessment criterion was higher than the solubility limit of the carbon fraction). Hence, the TPH detections are not considered to represent a vapour intrusion risk.

#### 2.2 Summary of Historical Surface Water and Leachate Analytical Results

The historical sampling results (attached Table 2) have indicated that:

- Significantly higher ammonia, TKN, TOC and BOD concentrations were reported in leachate samples than those reported in the surface water samples.
- Nitrite concentrations were either low (surface water sampling locations 1 and 2) or below the laboratory LOR (remaining surface water sampling locations and leachate).
- Of all the surface water samples, higher ammonia, TKN, TOC, BOD and metal concentrations were generally reported at sampling locations 1 and 2 than the remaining sampling locations.
- Metals including arsenic (As), cadmium (Cd), chromium (Cr), Pb, and mercury (Hg) were either low or below the LORs at all surface water sampling locations. The reported AI and Cu concentrations have been consistently greater than the adopted assessment criteria at sampling locations 1 and 2. Of note, samples for metal analysis were unfiltered in all sampling events.
- Metal concentrations reported in leachate samples were generally higher than those reported in the surface water samples and the reported Al, Cd, Cu, Pb, Ni and Zn concentrations have been consistently greater than the adopted assessment criteria.
- The reported concentrations of the organic analytes were generally below the laboratory LORs in all surface water samples.
- The majority of organic analytes were below the laboratory LORs, and detect concentrations above the LOR were below the assessment criteria where available in the leachate samples. The organic analytes detected above the LORs in leachate included 1,2,4 trimethylbenzene (ranging from 7-10 µg/L), p-isopropyltoluene (9-13 µg/L), 2-butanone (MEK) (1530-4250 µg/L), 4-methyl-2-pentanone (MIBK)(<50-80 µg/L), total phonels (2070-3750 µg/L), naphthalene (<9.4-11.1 µg/L), benzene (2-4 µg/L), toluene (16-53 µg/L), ethylbenzene (6-12 µg/L), m-&p-xylene (13-26 µg/L), o-xylene (9-17 µg/L), TPH C₆-C₉ fraction (220-540 µg/L) and C₁₀-C₃₆ fractions (43200-80700 µg/L).

In addition, major cations and anions have been tested for the collected groundwater, surface water and leachate samples. The results will be used to characterise the general water chemistry across the site and to assess whether leachate impact to groundwater / surface water is occurring.

#### 3.0 OBSERVATIONS AND RECOMMENDATIONS FROM BASELINE MONITORING

### 3.1 RESPONSE TO COUNCIL COMMENTS

Three items of concern were noted by Council during the review of the hydrogeological investigation report. Golder addresses these below and recommends the following:

- A low reported ammonia concentration (0.69 mg/L) in a leachate sample in December 2011. It was apparent this value was lower than expected; however, review of the sampling documentation and laboratory report did not identify an obvious source of error. This was the first sample collected under the current programme, and was the only result available when the hydrogeological assessment was prepared. Since the December 2011 monitoring round, three samples were collected with ammonia concentrations ranging from 1440 to 2160 mg/L. It is recommended this range is considered as a representative range of ammonia concentrations in leachate.
- A low value of EC (0.1 µS/cm) was reported for the surface water pond samples in the Biosis Report (March, 2012). The recorded EC values for the six surface water monitoring locations supplied to Biosis included two ranges: 1,290 to 1,560 µS/cm in the western ponds; and 620 to 13,990 µS/cm in the leachate ponds at the base of the Eastern Gully Landfill. It is recommended these ranges are taken as the representative conductivities across the site's surface water ponds.
- Elevated concentrations of nutrients (ammonia, TKN, TOC) and manganese in monitoring well GMW109S. This location is on the south-eastern (downgradient) site boundary, and shows anomalously high concentrations in comparison to all other groundwater sampling locations. The source of impact is uncertain, as the upgradient monitoring wells and adjacent stormwater ponds do not reflect these concentrations. As the elevated concentrations have been consistent at this location throughout the baseline monitoring program, it is recommended that further targeted assessment of the potential source and associated risks is undertaken.

#### 3.2 PROPOSED REVISIONS TO THE BASELINE MONITORING PROGRAM

Based on a review of the available monitoring results, revisions to the monitoring analytical suite are proposed, as presented in Table 1.

Analyte	Quarterly	Annual	Comment
Temperature	Х	Х	Field measurement
рН	Х	Х	Field measurement
Electrical Conductivity	Х	Х	Field measurement
Dissolved Oxygen	Х	Х	Field measurement
Oxidation Reduction Potential	Х	Х	Field measurement
Total Suspended Solids	Х	Х	Surface water only
Calcium		Х	
Magnesium		Х	
Sodium		Х	
Potassium		Х	
Chloride	Х	Х	
Sulphate		Х	
Alkalinity	X (total)	X (spec.)	
Aluminium		Х	
Arsenic		Х	
Cadmium		Х	
Chromium (total)		Х	
Copper		Х	
Iron	Х	Х	
Manganese	Х	Х	
Mercury		Х	
Nickel		Х	
Lead		Х	
Zinc		Х	
Ammonia	Х	Х	
Total Kjeldahl Nitrogen	Х	Х	
Total Petroleum Hydrocarbons		Х	
Volatile Organic Compounds		Х	BTEX and naphthalene only
Total Organic Carbon	Х	Х	

#### Table 1: Proposed Revisions to Monitoring Analytical Suite

From review of the baseline data, the analytes (or groups of analytes) in Table 2 are proposed to be excluded from future monitoring as they were either not detected in leachate, or alternative analytes provide equivalent information:

Analyte	Comment
TDS	EC provides equivalent information
Nitrate and nitrite	Below LOR or only present at low concentrations
Fluoride	No value to monitoring objectives
VOCs	Limit to BTEX and naphthalene
PAHs	Not detected in leachate, surface water or groundwater (with the exception of naphthalene, addressed in Table 1)
Phenolics	Proposed only as a contingency if significant leachate impact is suspected.
BOD	TOC provides equivalent information

Table 2: Analyte	es proposed fo	or exclusion from	further monitoring
1			

The results of monitoring should be reviewed on an annual basis to assess whether further revisions to the monitoring program are warranted, including monitoring locations, frequency and analytical suite. Where potential indications of leachate impact are identified in surface water or groundwater, further targeted assessment may be warranted with regard to the source of the leachate release, and potential risks to human health and the environment.

#### 4.0 CONCLUSIONS

A review of the baseline surface water, groundwater and leachate monitoring program for the WGRRP has identified an opportunity to optimise the ongoing compliance monitoring program to focus on key water quality and leachate indicator parameters.

The baseline data for monitoring well GMW109S suggest a potential source of groundwater quality impact is affecting this location. It is proposed that a targeted assessment program is developed to evaluate potential sources of impact, and to consider the associated risks to human health and potential receiving environments.

#### 5.0 CLOSURE

We trust that this technical memorandum is adequate for your requirements. Please contact the undersigned if you wish to discuss the review provided or if we can be of further assistance.

Whytes Gully Resource Recovery Park - Landscape Strategy

#### **1.0 OBJECTIVES AND PRINCIPLES**

The Landscape Strategy presented in this Report provides the basis for planning and design of the post-completion landscape at the Whytes Gully Resource Recovery Park (WGRRP). The Landscape Strategy will guide the transition from the operational stage of the new landfill to the post completion stage by addressing the recommendations of the Visual Impact Assessment carried out as part of the Environmental Assessment prepared by Golder Associates.

The Strategy aims to create a landscape that is both robust and visually compatible with the character of surrounding areas while requiring minimum maintenance once it is established. The Strategy takes account of the operational requirements of the Landfill, which includes staging of the landfill operations, slope stability, stormwater management, maintenance access and bushfire management.

The proposed plant species and planting structure will establish vegetation that forms a sustainable ecosystem similar to the adjoining areas of remnant vegetation providing wildlife habitat and contributing to the ecological values of the region.

The proposed landscape works will also add value to the site by creating potential public open space recreation opportunities following completion of the landfill operations and closure of the site.

#### 2.0 KEY COMPONENTS

The Landscape Strategy incorporates the following Key Components:

- staging of the revegetation will aim to ensure the area of un-vegetated landfill slope is minimised by progressively establishing a vegetation cover on each section of slope as it is completed;
- existing vegetation on the portions of site not required for landfill, particularly mature remnant trees, will be retained wherever possible to provide visual screening and contribute to the landscape character of the site;
- vegetation to be established on the landfill slopes will include a mix of shrubs and small trees with areas of grass that will create a landscape character similar to adjoining rural areas;
- the top of the new landform will be visually modified to ensure it is visually compatible with the surrounding topography;
- views to the coast will be maintained from the potential lookout area on the landfill ridgeline and from properties upslope of the site;
- screen planting with dense tall tree planting on natural ground will be used to block views to the site, particularly from adjoining residences;
- biodiversity and habitat values will be maintained and increased where possible by planting a range of indigenous species;
- the potential will be created for future public open space facilities such as a lookout and passive recreation areas with access provided by upgrading the maintenance track to the top of landfill landform;
- the visibility of drainage channels on the slopes will be minimised by design options that could include the use of dark coloured stone and native grasses;
- provision of a maintenance program that includes regular removal of identified weed species;
- coordination of vegetation planting with bushfire management requirements that include access tracks and fuel management zones.

### 3.0 PLANT SELECTION

The selection of plant species to be used in implementing the Landscape Strategy has taken account of various considerations that include:

- visual and landscape character of surrounding areas;
- growing conditions including soils, aspect and drainage;
- functional requirements that include visual screening, erosion control, weed management and minimising maintenance;
- ecological and biodiversity values of the site and adjoining areas;

In selecting the plant species to be used in the various locations the following planting types have been identified and are referred to on the Landscape Strategy Plan:

Type 1 - Screen planting along site boundary

Type 2 - Tree planting on natural ground

Type 3 - Shrub and small tree planting on landfill

Type 4 - Grass planting, native and exotic on landfill including drainage channels

In identifying the mix of species to be used in each Planting Type reference has been made to the Whytes Gully New Landfill Cell Development Flora & Fauna Assessment Report, 2011 by Biosis Research for Golder Associates. Particular reference was made to Section 3.1 Vegetation Communities and Appendix 1, Flora Studies Inventory.

Existing remnant plant communities include Lowland Dry Subtropical Rainforest and Moist Box Redgum Foothills Forest occurring on the WGRRP site are to be retained and protected.

Planted vegetation is to be retained wherever possible subject to the bushfire mitigation measures described in the Bushfire Report Section 5.0, which include:

- the canopies of retained trees are to be a minimum of 10m from any building;
- planted trees are to have lower branches trimmed to a height of 2m above the ground.

The Bushfire Report recommends that fuel load formed by vegetation should not exceed 2t/ha.

#### 4.0 PLANTING TYPES

The Landscape Strategy includes four recommended Planting Types that respond to different growing conditions and aim to achieve specific landscape objectives. Each of these Planting Types are described in terms of their objective and implementation requirements.

#### Type 1 - Screen planting along boundaries

The proposed planting along sections of the site boundary is intended to provide visual screening of the landfill operations from adjoining properties. In order to fulfil this function the planting will need to be carried out in advance of the landfill operations. A minimum of 5 years growth will be required to provide the intended visual screening.

Mixture of tall and small canopy trees combined with shrub understorey along the edges is proposed to provide visual screening and to form a closed canopy that will minimise the growth of weeds.

Detailed design of the planting will need to take account of access tracks and fuel load levels required for bushfire management.

Site preparation is to include ripping to a minimum depth of 300mm to create suitable soil profile for tree root growth. Coarse wood chip mulch is to be applied to maintain soil moisture and reduce weed growth. Tree guards are to be installed to protect the plants from rabbits and other animals while providing an improved microclimate for the plant and protection from wind.

#### Type 2 - Tree planting on natural ground

The objective of this Planting Type is to provide additional visual screening to views of the landfill operations from public roads and areas adjoining the site. Trees are to be planted in informal clumps to create an appearance similar to the remnant clumps of trees occurring on the site and adjoining areas. Spacing between 1.5 and 3m centres is recommended, depending on species.

TYPE Z

The locations identified for this Planting Type have natural soil profiles that generally provide good growing conditions. Ground preparation should include deep ripping to a minimum of 300mm and removal of existing grass and weeds using a non-residual herbicide such as Roundup.

Trees to be planted should be supplied in 5 litre container sizes.

Tree guards are to be installed to protect the plants from rabbits and other animals while providing an improved microclimate for the plant and protection from wind.

Coarse wood chip mulch is to be placed over the soil surface to maintain soil moisture and reduce weed growth.

#### Type 3 – Shrubs and small trees on landfill

The objective of this Planting Type is to establish areas of vegetation consisting of shrubs and small tree to reduce the visual prominence of the landfill landform by creating a landscape character similar to adjoining rural land use areas. It will also create visual variation in the apparent height of the ridgeline to be created by the proposed landfill operations.

Requirements for ongoing maintenance will be reduced by creating a continuous canopy cover that will suppress weed growth.

The dense layered vegetation structure will resemble the ecosystems within the remnant vegetation adjoining the landfill, enhancing wildlife habitat and biodiversity.

The recommended species are suitable for the limited soil depth that will be provided on top of the impermeable membrane over the landfill cells. Planting of tubestock is recommended to allow plants to adapt to these growing conditions. Plant roots should be pruned in the nursery to encourage lateral root development prior to planting.

Dense planting in an informal layout will create a closed canopy relatively quickly to minimise weed growth and visually relate the new vegetation to existing vegetation adjoining the landfill.

A minimum depth of 1 metre will be required to allow adequate root growth to ensure plant survival during periods of low rainfall. If shallower soil depths are adopted the final vegetation height may be reduced and some of the trees and shrubs may die during prolonged dry periods unless irrigation is adopted.

The growing medium will need to contain adequate nutrients and organic matter for adequate plant growth. As soil to be used as the growing medium is likely to come from various sources there is likely to be significant variation from one area to another. Regular Soil Testing will therefore need to be carried out in a testing laboratory and recommended treatments implemented.

Site preparation is to include removal of existing grass and weeds using a non-residual herbicide such as Roundup and ripping to a minimum depth of 300mm

Coarse wood chip mulch is to be applied to the soil surface to minimise weed growth and associated maintenance requirements.

If areas of slope are steeper than 1:3 or greater occur then 'Jute mesh' or similar should be applied to provide erosion control.

#### Type 4 - Grass planting on landfill

The objective of this Planting Type is to establish a grass cover on the final landfill slopes that is visually compatible with the landscape character of adjoining rural land use areas and requires minimum maintenance.

A combination of native grasses and pasture species is recommended. The pasture species are to be established on the side slopes of the landfill which are generally 1:4 gradients. Areas of native grass are proposed on the gentler slopes on top of the final landform of the landfill. Native grass species are also recommended for use along the drainage ways where moist growing conditions occur and soil-binding grasses are required.

The grass cover is to be established progressively as each section of landfill is completed to protect the slope from possible soil erosion.

Soil depth of 800mm is recommended to allow the development of deep roots that will assist survival during periods of low rainfall. Soil depth of 500mm may be adequate but the vigour of grasses is likely to be reduced in drought periods due to the reduced available soil moisture provided by 500mm unless irrigation is adopted.

The quality of soil used will need to be monitored to ensure adequate nutrients and organic matter content for healthy growth of the grass. Soil preparation should include cultivation to minimum depth of 150mm and removal of existing weeds using a non-residual herbicide such as Roundup.

Maintenance will include periodic slashing as required for bushfire management and spot spraying of weeds with a non-residual herbicide.

#### **Planting Plans**

The Indicative Plant Schedule presented on the following page lists recommended species to be used in each Planting Type. These species are to be used in preparing detailed Planting Plans that will be required for implementation of the Landscape Strategy. The Planting Plans will need to be coordinated with detailed layout of infrastructure elements including roads, tracks, surface drainage and gas well heads. A Landscape Maintenance Schedule will also need to be prepared that is coordinated with the landfilling operations and landfill closure plan.

### INDICATIVE PLANT SCHEDULE - Whytes Gully Recovery Park

BOTANICAL NAME	COMMON NAME	Type 1 Screen Planting along Boundary	Type 2 Tree Planting on Natural Ground	Type 3 Shrub & Small Tree Planting on Landfill	Type 4 - Grass planting on landfill
Tall Canopy Trees					
Acacia melanoxylon	Black Wattle				
Angophora floribunda	Rough-barked Apple				
Casuarina glauca	Swamp Oak				
Diploglottis australis	Native Tamarind				
Cryptocarya glaucescens	Jackwood				
Eucalyptus botryoides x saligna	Blue x botryoides Gum				
Eucalyptus crebra	Narrow-leaved				
Eucalyptus guadrangulata	White-topped Box				
Eucalyptus tereticornis	Forest Red Gum				
Ficus rubiginosa	Port Jackson Fig				
Syzygium australe	Brush Cherry				
Toona australis	Red Cedar				
Small Trees					1
Acacia mearnsii	Black Wattle				
Acacia implexa	Hickory Wattle				
Acmena smithii	Lilly Pilly				
Alphitonia excelsa	Red Ash				
Backhousia myrtifolia	Grey Myrtle				
Brachychiton populneus	Kurrajong				
Diospyros australis	Black Plum				
Glochidion ferdinandi	Cheese Tree				
Melaleuca linariifolia	Snow in Summer				
Melaleuca stypheliodes	Prickly-leafed Tea Tree				
Notelaea longifolia	Large mock-Olive				
Streblus brunonianus	Whalebone Tree				
Shrubs	Two Vicined Hickory	1	1		
Acacia binervata	Two Veined Hickory				
Acacia falcata	Sickle Wallie				
Acacia longifolia	Wattle				
Breynia oblongifolia	Coffee Bush				
Clerodendrum tomentosum	Hairy Clerodendrum				
Dodonaea viscosa	Common Hop Bush				
Bursaria spinosa	Blackthorn				
Hakea salicifolia	Willow-leafed Hakea				
Kunzea ambigua	Tick Bush				
Grasses Native (Dry Zones)					
Astrodanthonia monticola	Small-flower Wallaby Grass				
Imperata cylindrica	Blady Grass				
Lomandra longifolia	Spiny-headed Mat Rush				
Microlaena stipoides	Weeping grass				

BOTANICAL NAME	COMMON NAME	Type 1 Screen Planting along Boundary	Type 2 Tree Planting on Natural Ground	Type 3 Shrub & Small Tree Planting on Landfill	Type 4 - Grass planting on landfill
Poa labillardieri	Tussock Grass				
Themeda australis	Kangaroo Grass				
Fimbristylis dichotoma	Common Finge- sedge				
Grasses Native (Wet Zones)					
Carex appressa	Tall Sedge				
Gahnia sieberiana	Red Fruited Saw Sedge				
Juncus continuus	Rush				
Lepidosperma laterale	Variable Sword Sedge				
Oplismenus imbecillis	Basket Grass				
Pasture Grasses					
Austrodanthonia richardsonii	Wallaby Grass				
Cynodon dactylon	Unhulled Couch				
Microlaena stipoides	Weeping grass				
Themeda australis	Kangaroo Grass				
Cover Crop		•	•	•	
Echinocloa itilis (Sept-Mch) or Secale cereale (Apr-Aug)	Japanese Millet or Rye Corn				
Lolium multiflorum	Eclipse Rye				
Trifolium pratense	Red clover				

#### 5.0 LANDSCAPE MAINTENANCE

The Landscape Strategy incorporates measures to minimise maintenance requirements which will decline as the new vegetation is established in particular areas. However, there will be a need for some ongoing landscape maintenance to ensure it achieves the objectives of the Landscape Strategy and fire management requirements.

The main ongoing maintenance will involve weed management. The primary objective will be to minimise the introduction of weeds to the site and control those that currently occur.

The following general recommended measures should be incorporated into Maintenance Schedules as part of Detailed Planting Plans:

- ensure plant stock as well as wood chip mulch are free of weeds;
- carry out regular inspections of the site to identify the presence of weeds and implement appropriate control measures;
- remove dead vegetation and replace failed plantings;
- replace areas of failed grass sowing to ensure continual cover of vegetation over the landfill ground surface;
- check and repair or replace tree guards if damaged or missing;
- fertilise plants during the growing season;
- prune trees and shrubs to meet bushfire mitigation requirements;
- check for pests and diseases and implement control measures;
- maintain an adequate depth of mulch;
- slash and / or mow grasses to maintain a fuel load that does not exceed 2t/ha.

### 6.0 LANDSCAPE STRATEGY PLAN AND CROSS SECTIONS

**Noise Management Plan** 

### 3.0 ENVIRONMENTAL MANAGEMENT PLANS

CEMP

### 3.1 Air Quality

#### 3.1.1 Environmental Aspects and Impacts

The most likely contributors to affect air quality at the site include but are not limited to:

- Vegetation removal during construction
- Haul Roads
- Equipment and Plant Emissions
- Dust generation during earthworks construction and stockpiling of materials
- Waste material odour generation

#### 3.1.2 Requirements

The CEMP will include procedures for air quality management, including dust and odour, to meet the following objectives:

- To conform with WorkCover, NSW, OEH, NSW and Council requirements for the management of odour, dust, landfill gas and asbestos containing material (if encountered); and
- To minimise odour and dust emissions from the site which could adversely affect air quality or the amenity of the local area.

Works would be conducted with reference to the following relevant guidance documents:

- National Environmental Protection Council (1998); National Environment Protection Measure (NEPM) on Ambient Air Quality.
- DEC, NSW (2005); Approved Methods for the Modelling and Assessment of Air Pollutants in NSW.
- DEC, NSW (2007); Approved methods for the Sampling and Analysis of Air Pollutants in NSW.
- NSW Solid Waste Landfill Guidelines, NSW EPA 1996
- National Occupational Health and Safety Commission, 2nd Edition (NOHSC; 2002(2005)) Code of Practice for the Safe Removal of Asbestos.

#### 3.1.3 Management Strategy / Control Measures

The Contractor, in order to limit air quality impacts shall as a minimum:

- Minimise the dust, odours and emissions generated onsite due to construction activities.
- Consider weather conditions prior to commencing work.
- Not burn any materials onsite.

#### Plant and Equipment

The Contractor will develop a plan that includes the following requirements for machines:

- All plant used on site shall comply with OEH licence conditions.
- Operators of machinery will make a concerted effort to minimise unnecessary movements onsite.

- Operators of machinery must comply with speed limits established onsite by the Wollongong Council.
- Trucks carrying materials or travelling on public roads should be covered to prevent spills or dust emissions.
- Trucks travelling offsite must have their tires cleaned to prevent spillage of soils offsite.

#### **Dust Suppression**

Dust generation and transport off-site will be controlled by:

- Provision of shade cloth along the site boundary fences. This can be limited as required to the current areas of work.
- Use of water sprays to suppress dust generation.
- Watering of active work areas including haul roads and stockpiles by water cart and/or sprinklers to suppress dust in dry conditions when necessary (the water will be applied across ground surfaces to prevent the surface drying out and generating visible levels of dust, either by the operation of equipment over the surface or by wind).

#### **Odour Control**

The Contractor should manage the amount of odour, landfill gas or vapour generated from the proposed works, and ensures minimal impact on the air quality of the local area and health of onsite workers and the general community.

The Contractor should implement the following measures:

- The area of waste exposed at any one time would be minimised wherever possible by a localised staged program.
- Cover material should be applied of an increasing thickness to control odour whenever necessary.

#### Landfill Gas

 Landfill gas emissions will be monitored during the works in the waste excavation areas. If elevated readings are obtained work methods will be reviewed and changed as necessary.

#### 3.1.4 Monitoring

The ambient air quality monitoring program shall be conducted by the Contractor throughout the contract period. The purpose of the monitoring program shall be to monitor the Contractor's compliance with ambient air quality standards at the boundaries of the site, and to demonstrate that site works undertaken by the Contractor have not adversely impacted surrounding areas.

- The monitoring program shall involve dust monitoring, odour assessments and explosive gases (methane).
- Dust control measures will be monitored by qualitative assessment (i.e. visual inspection) and air quality monitoring. Visual assessments will be conducted at the start of each new construction activity. Quantitative air quality monitoring will be conducted on a monthly basis.
- Odour assessment should be performed prior to, during and following the proposed waste relocation works. Explosive gas monitoring will be conducted over areas where waste or leachate has been exposed at the commencement of an activity.

# 3.1.5 Corrective Action

The ambient air quality shall be considered to be unacceptable should any one result fail to meet the air quality standards.

In the event that the ambient air quality is found to be unacceptable, the Contractor shall immediately instigate works to rectify the ambient air quality in order that it reaches an acceptable quality within the shortest time period. Rectification of the ambient air quality shall initially involve the suspension by the Contractor of any activity that is contributing to the generation of unacceptable dust, odours, explosive gases.

# 3.2 Water Quality

# 3.2.1 Environmental Aspects and Impacts

Water quality impacts are most likely to be caused by:

- Haul Road Erosion
- Erosion of stockpiles
- Erosion due to vegetation removal during construction
- Off site impact by contaminated runoff

### 3.2.2 Requirements

The CEMP will include procedures for management of water to meet the following objectives:

- To prevent surface run off from becoming contaminated as a result of soil disturbance or contact with waste.
- To control erosion and sediment transport from the site, and thereby minimise the potential for off-site contamination of surface water by sediment.
- To control and manage run off in sediment control ponds prior to discharge from the site.
- To minimise potentially contaminated groundwater entering excavations.

# 3.2.3 Management Strategy / Control Measures

Surface water on this project falls into 2 categories as follows:

- Clean' stormwater all water which falls on undisturbed areas of the site
- 'Dirty; stormwater all water which falls over disturbed areas. (i.e. cleared for construction or stockpiles of uncontaminated material) areas and is potentially contaminated with gross pollutants, sediments, etc.
- 'Leachate' all water which falls over areas of exposed waste

The Contractor shall develop detailed Soil and Water Management Plans including schematics of planned control measures. The Contractor may be allowed to use existing stormwater management infrastructure following negotiation with council.

#### 3.2.3.1 Control and Management of "Clean" Stormwater

All "clean" stormwater shall be managed in accordance with the requirements of DECC, 2008, Managing Urban Stormwater, Soils and Construction, Volume 2B Waste Landfills, June 2008

"Clean" stormwater within the site shall be allowed to discharge directly into the existing natural drainage system with no treatment and/or containment required. "Clean" stormwater runoff will be diverted around disturbed areas to minimise the volume of "dirty" water generated.

The Contractor shall intercept and redirect runoff in a controlled manner by any appropriate means including but not limited to, use the existing drainage, construct new drains and temporary bunds to direct stormwater runoff from up-gradient around any construction onsite.

# 3.2.3.2 Control and Management of "Dirty" Stormwater

All "dirty" stormwater shall be managed in accordance with the requirements of DECC, 2008, Managing Urban Stormwater, Soils and Construction, Volume 2B Waste Landfills, June 2008

The Contractor shall implement the following control measures to mange "Dirty" Stormwater impacted by sediment as a minimum:

- Construction of temporary sediment ponds with disposal by:
  - Evaporation from the pond surface
  - Use for dust suppression
  - Use for irrigation of revegetated areas
  - Treated to remove the suspended solids and minor gross pollutants and disposal to the natural drainage system
- Erosion and sediment control must be installed prior to any earthworks or site disturbance.
- Construct upslope diversion drains to collect and divert clean water around the active construction areas. Diversions must be installed and maintained to prevent off-site surface water run-off from entering disturbed areas of the site.
- Keep working face and areas of open excavation to a minimum.
- Do not place stockpiles within 30 metres of any watercourse.
- Place an effective combination of sediment filters, barriers and/or basins at the down slope boundary of all disturbed areas. Place silt fence/erosion controls around stockpiles.
- Stabilise all disturbed areas as soon as practicable. Temporary vegetative destabilisation techniques must be applied to any disturbed soil to prevent areas remaining bare for more than 28 days.
- Stabilise all temporary and permanent drainage immediately.
- Maintain all sediments and erosion control measures in effective condition until the works are completed and the site is stabilised.
- Clean sediment traps when their capacity is reduced by 30 percent.
- Bund fuels, oils, paints, and other chemicals onsite to comply with the requirements of;
  - AS1940B 1993: The Storage and handling of Flammable and Combustible Liquids
  - AS4452B 1997; The Storage and Handling of Toxic Substances
  - Dangerous Goods (Roads and Rail Transport) Act 2008
- Bunds must be fitted with an impervious floor and must not be fitted with a drain valve.

- Construct vehicular crossings in a manner that prevents sediment from washing into the water course or stream.
- Remove accidental spills of soil or other materials.
- Release "Dirty" Stormwater, captured and stored by sediment and erosion control measures or site works, after treatment and testing to confirm compliance with relevant criteria.
- Rapid re-vegetation of exposed areas where possible.

#### 3.2.3.3 Control and Management of Leachate

All leachate shall be managed in accordance with the requirements of DECC, (2008) Managing Urban Stormwater, Soils and Construction, Volume 2B Waste Landfills, June 2008 and NSW EPA (1996) Environmental Guidelines, Solid Waste Landfills, January 1996.

The general requirements for managing leachate are outlined in the following points:

- All leachate will be diverted to the leachate management system on site.
- Progressive construction of bunds around areas which can give rise to leachate to direct control and direct surface waters away from any exposed waste areas.
- Progressive covering of waste to minimise the available catchment area for the generation of leachate.
- Diversion of upgradient surface waters prior to coming in contact with areas which can give rise to leachate.

#### 3.2.4 Monitoring

The objective of the surface water monitoring plan is to effectively monitor and report surface water character and ensure early detection and reporting of possible pollution to surface water.

The water quality shall be considered to be unacceptable should any one result fail to meet the water quality standards. In the event that the water quality is found to be unacceptable, the Contractor shall immediately instigate works to rectify the water quality in order that it reaches an acceptable quality within the shortest time period.

The Contractor shall regularly inspect the conditions and integrity of protection works at a frequency not less than:

- Prior to the commencement of each working day
- At hourly intervals throughout major storm events
- Prior to the re-commencement of work following rainfall of more than 1 mm

At each inspection the Contractor shall record the condition of the protective works, their performance, the extent of any maintenance, and the need for any additional works.

# 3.2.5 Corrective Actions

The Stormwater Management Plan shall identify mechanisms to identify and address the cause of any sediment dispersion or leachate runoff.

# 3.3 Erosion and Sediment

# 3.3.1 Environmental Aspects and Impacts

Impacts on erosion and sediment are most likely to occur during major rainfall events and heavy wind. The Contractor may combine the erosion and sediment control plan with the stormwater management plan as these two issues are strongly correlated.

## 3.3.2 Requirements

The CEMP will include procedures for management of soil and erosion to meet the objectives of DECC, 2008, Managing Urban Stormwater, Soils and Construction, Volume 2B Waste Landfills, June 2008.

The CEMP will include procedures for management of erosion and sediment to meet the following objectives:

- To control soils released as a result of site excavations and the handling, including stockpiling, loading and/or placement of site and imported materials.
- To control erosion and potential sediment transport from the site.
- To minimise the extent of soil transport and erosion by heavy machinery.

# 3.3.3 Management Strategy / Control Measures

Soil and erosion management during the construction activities may be controlled by:

- Construction of earth bunds and similar diversion drains around the perimeter of construction areas where surface disturbance occurs, to prevent surface water entering these areas.
- Erection of silt fences or straw bales at strategic locations (i.e. around stockpiles) to prevent the migration of fines.
- Construction of temporary sediment retention ponds.
- Installation of water recycling equipment for dust suppression as needed.
- Minimising the surface area disturbed by construction activities at any one time.
- Regular inspection and maintenance of erosion control structures.
- Protecting and retaining surface cover where possible.
- Placement of an erosion protection barrier (e.g. grassing) at the completion of works.
- Restricting vehicles to designated access roads and paths where possible.
- Washing trucks and plant (bodies, wheels and undercarriage) moving from asbestos impacted areas to other areas of the site or off site (if asbestos is found).
- Removing soil adhering to the wheels and undercarriage of trucks (e.g. by wheel wash) prior to departure from the site.

In addition, every effort will be made to limit both the site of any stockpile footprints and the time between excavation and removal off-site of materials.

# 3.3.4 Monitoring

An erosion monitoring program shall be conducted by the Contractors at the site throughout the construction period to monitor compliance with the erosion and sediment plan. Monitoring frequency for erosion and sediment control should be undertaken concurrently with stormwater management monitoring.

# 3.3.5 Corrective Actions

The Erosion and Sediment Control Plan shall identify mechanisms to identify and address the cause of any sediment dispersion or leachate runoff.

# 3.4 Noise

### 3.4.1 Environmental Aspects and Impacts

Noise pollution will most likely be caused by plant and equipment during construction or traffic to and from the site.

## 3.4.1.1 Sensitive Receivers

The nearest residential receivers to Whytes Gully RRP have been identified based upon aerial photos and site visits and are considered to be the most likely noise sensitive receivers to be impacted by the Project based on the attenuation of noise at this location. The noise sensitive receivers are shown in Figure 10.1 and are identified as follows:

- N1 Residence NW of Whytes Gully RRP;
- N2 Residence NE of Whytes Gully RRP;
- N3 Residence SW of Whytes Gully RRP;
- N4 Residence NE of Whytes Gully RRP; and
- N5 Closest Resident at Farmborough Heights.

# 3.4.2 Requirements

The noise management plan will:

- Identify best management practice techniques to minimise noise from the construction and operation of the project; and
- adhere to regulatory limits for noise emissions.

Measures shall be undertaken by the Contractor to minimise the generation of noise from within the site. The Contractor shall use the best available technology and the best practicable means to prevent or mitigate the effects of noise emission from the works, and shall be prepared to demonstrate that plant, equipment and methods comply with these requirements at all times.

# 3.4.3 Project Noise Limits

The noise limits for the project set out by Condition 31 of the CoA are as follows:

Residential Receiver Location	Day L _{Aeq (day)}
N1	47
N2	45
N3	38

#### Table 2: Noise impact assessment criteria dB(A)

Residential Receiver Location	Day L _{Aeq (day)}
N4	35
N5	35

# 3.4.4 Management Strategy/Control Measures

The Contractor is responsible for implementing all noise migration measures required by the CEMP from the start of construction. The Contractor will be responsible or limiting all noise produced on site.

The Contactor shall use the best practical means to minimise noise levels in all sections of work.

The Contractor will include construction noise issues in site induction of staff and sub-contractors. This will include communication of the restrictions on hours of construction, the number and types of known sensitive receivers and their location relative to the project site, and the requirements for implementing noise management set out below.

The Contractor shall implement the following control measures throughout the works:

- Neighbouring premises will be informed of the work programme, potential impacts, and measures taken to minimise the impacts.
- A minimum of 48 hours notice will be given to directly affect premises prior to construction works commencing.
- Advising neighbouring premises of any variation to work hours prior to work commencing.
- Standard construction working hours 7:30 am to 4:30 pm Mondays to Fridays and 8:00 am to 4:00 pm Saturdays. No construction works shall take place on Sundays or Public Holidays. These hours may be varied only with prior written consent of the OEH.
- All vehicles shall enter and leave the site in accordance with the site entry controls.
- Equipment will be selected on the basis of its noise performance and will comply with regulatory standards for noise generation.
- All equipment on site shall be fitted with OEH approved residential silencers
- All items of mobile plant and equipment used are required to be fitted with broadband audible reversing alarms.
- Vibrations generated on the site shall be within relevant noise control guidelines
- Maintenance and/or repairs of plant and equipment may be carried out by the Contractor outside the above hours provided that:
  - Plant and equipment subject to maintenance and/or repairs, and compounds for overnight onsite parking of vehicles and mobile plant, shall be located as far away as possible from noise sensitive premises.
  - The Contractor can demonstrate that noise levels at the site boundaries are not adversely impacted.
  - No heavy machinery shall be operated during this period.

- Noise to be generated by these maintenance and/or repair works during the extended operational hours shall be inaudible at any noise sensitive premises.
- The Contractor will be directed to cease maintenance and/or repair work during the extended operational hours if noise emission becomes audible at any noise sensitive premise.
- Emergency work may be carried out by the Contractor which is required outside the specified hours provided;
  - The site superintendent is satisfied that the proposed work is of an essential nature and cannot be carried out during specific hours.
  - The Contractor submits a report summarising the event to the Site Superintendent within 48 hours after the event commenced.

In order to meet the noise standards, the Contractor shall provide appropriate measures such as the adoption of suitable methodologies, selection of quieter equipment, use of acoustical enclosures, construction of suitable placed acoustic barriers or earth mounds, and the fitting of "residential" class mufflers and noise reduction kits to heavy equipment, controls on the hours of operation or controls on the programming of works shall be implemented.

# 3.4.5 Monitoring

A noise monitoring program shall be conducted by the Contractors at the site throughout the construction period to monitor compliance with the noise emissions limits.

The following noise monitoring will be undertaken:

- Periodic noise monitoring at nominated sensitive receiver locations (refer Section 3.4.3 of this plan) to determine effectiveness of mitigation measures against predicted impacts. Monitoring will include:
  - Compliance noise monitoring at the start of construction activities and subsequently on a monthly basis while significant noise generating activities are being undertaken
  - Where required and in response to a complaint, noise monitoring will be undertaken at the complainant's residence.
- Ongoing spot checks of noise intensive plant and equipment will be undertaken at project commencement and throughout construction to ensure compliance with the manufacturers specifications.
- Details of site activity and equipment usage will be noted during construction noise monitoring including the locations of mobile plant.
- Acoustic instrumentation employed in the use of noise monitoring surveys will comply with the requirements of AS1259.2-1990 Acoustics – Sound Level Meters, Part 2: Integrating – Averaging and carry appropriate NATA (or manufacturer) calibration certificates.

Noise monitoring reports will be prepared which will include the following information:

- Iocations and description of monitoring undertaken
- a tabulation of results and notes identifying the principle noise sources and operations
- summary of any measurements exceeding the noise limits, and descriptions of the plant or operations causing these exceedences
- details of any corrective actions and confirmation of their successful implementation.

# 3.4.6 Corrective Actions

Rectification of unacceptable noise levels shall initially involve the suspension by the Contractor of any activity that is contributing to the generation of unacceptable noise at the site. The rectification measures shall continue to be undertaken by the Contractor until the noise levels comply with the required limit.

# 3.4.7 Negotiated Agreements

In accordance with Chapter 8 of the EPA "NSW Industrial Noise Policy" (2000) negotiated agreements would be commenced prior to construction of the appropriate stage of the Project with the affected community (i.e. Receiver N1 – Stage 3, Receiver N2 – Stage 2).

# 3.5 **Public Roads Aspects and Impacts**

### 3.5.1 Environmental Aspects and Impacts

The condition of public roads adjacent to the Whytes Gully RRP will potentially be impacted by traffic travelling offsite.

# 3.5.2 Requirements

The objective of the Public Roads and Traffic Management within the CEMP will be to undertake the works with regard to the safety and welfare of the general public and to alleviate the impact of additional traffic volumes of site access and traffic flow in the surrounding area.

### 3.5.3 Management Strategy/Control Measures

The Contractor is required to develop a Public Roads and Traffic Management Plan for the works. This would as a minimum include the following control measures:

- Compliance with the requirements of the Construction Traffic Management Plan prepared by GTA Consultants, provided in APPENDIX A.
- Establishment of designated haul routes.
- Utilisation of a transport routes approved in the development consent conditions (if any) when travelling to and from the site as required.
- Access to neighbouring premises will be maintained at all times.
- Require all trucks travelling offsite to clean their tires and undercarriage of any loose soils.
- Ensure all trucks carrying loads offsite have adequately fastened and covered any materials they are carrying.
- If necessary, stockpile materials on-site temporarily to regulate and control the truck movements.
- Selection of roads which are to be used for transport of excavated materials on the basis that they have adequate capacity to accommodate the increased traffic volumes.
- Retention of heavy equipment on-site where practicable.
- Provision for a staging area for vehicles on site to prevent queuing on public roads outside of the site.

All truck drivers carting materials from the site will be given a safety instruction brief. The brief will be concise and shall detail the procedures to be followed by the truck driver should spillage of loads occur. These will include, but not limited to:

Vehicle Accident

### TABLES

APPENDICES APPENDIX A Emergency Response Procedures and Plans

**APPENDIX B** Surface Water Routing and Flood Analysis

# 1.0 INTRODUCTION

# 1.1 Background

The Whytes Gully Resource Recovery Park (RRP) is located on Reddalls Road, Kembla Grange NSW. The site is generally bounded by Reddalls Road to the south and west, rural residential lands to the north, northeast and north-west, and a water treatment plant to the south east. An industrial area lies to the south of Reddalls Road and Dapto Creek lies to the west.

# 1.2 Purpose

This document forms a practical guide to managing the requirements of the Project Approval in relation to flooding and emergency evacuation. The requirements are presented in Table 1.

Table 1: Con	ditions of Approva	I relevant to Flo	bod Emergency a	and Evacuation Plan

СоА	Condition Requirements	Document Reference
Schedule 4, Condition 16	Flooding Management 16. The Proponent must prepare and implement a Flood Emergency and Evacuation Plan to the satisfaction of the Director-General. The Plan must: a) be prepared by a suitably qualified and experienced expert in	
	<ul> <li>consultation with Council;</li> <li>b) be approved by the Director-General prior to the commencement of construction;</li> <li>c) ensure the project is designed in accordance with Chapter E13 of <i>Wollongong DCP 2009</i>, Council's Mullet and Brooks Creeks Floodplain Risk Management Study and Plan and the NSW Floodplain Development Manual, taking into account Council's conduit blockage criteria;</li> <li>d) identify contingency actions to be implemented in the event that the site is injundated during a major flood event to protect.</li> </ul>	Section 2
	<ul> <li>the integrity of stormwater/leachate ponds and prevent release of stormwater/leachate into the local environment including water quality control measures; and</li> <li>human safety.</li> <li>e) identify emergency evacuation routes, flood warning alarms, and evacuation procedures.</li> <li>This plan must be documented in the Landfill EMP (see Condition 3 in Schedule 5).</li> </ul>	Section 3 and Appendix A

# 1.3 **Design Requirements**

Design of surface water features for the Project relevant to flooding will be conducted in accordance with the requirements of:

- Chapter E13 of Wollongong DCP 2009
- Council's Mullet and Brooks Creeks Floodplain Risk Management Study and Plan
- NSW Floodplain Development Manual
- taking into account Council's conduit blockage criteria.

Design of the surface water features will be documented in design drawings and a design report for each stage of the project.

# 2.0 FLOOD

# 2.1 Existing Environment

The site is located to the north of the Mullet Creek floodplain. To the southwest of the site lies Dapto Creek.

The Whytes Gully site lies upstream of the Mullet Creek floodplain and the majority of the site exists above the flood planning area, as defined in the LEP.

The Mullet Creek floodplain is broad and flat and is hydrodynamically influenced by the Illawarra Railway and Lake Illawarra. Dapto Creek is a minor tributary of the Mullet Creek floodplain of moderate slope, 10 percent below the escarpment, with a contributing catchment of only 280 ha.

The current flood study for Mullet Creek is presented in the Bewsher (2011) "Mullet Creek, West Dapto Extension of Flood Model".

# 2.2 Impact Assessment

The Project would include reconfiguration of the leachate ponds in Lot 50, DP 1022266 as well as reconfiguration of the surface water treatment ponds in the south of Lot 50. The proposed leachate treatment pond lies above the FPL, therefore reconfiguration would not affect flood level or flood behaviour. The footprint of the surface water treatment ponds lie within the FPA (or the interpreted extent including freeboard). However, the proposed configuration would be such so as to maintain existing floodplain storage at this location. Accordingly the Project would not affect flood levels or flood behaviour.

The Project does not include alteration to existing land-use with respect to Lot 51, DP 1022266 and therefore would not affect flood levels or flood behaviour with respect to Lot 51.

A report on surface water routing and flood analysis was prepared by Golder Associates (2012) and is included in APPENDIX B.

# 2.3 Mitigation Measures

The project does not alter the existing flood storage. Accordingly the Project would not affect flood levels or flood behaviour.

# 2.4 Contingency Measures

Possible contingency measures to be implemented in the event that the site is impacted by a major flood event include:

- Temporarily shut down leachate transfer pumps and the leachate treatment system in case of impact of flood waters to leachate treatment system and transfer pumps.
- Sampling of waters discharged from site for leachate indicators in the event that leachate contamination of surface waters is suspected.

# 3.0 EVACUATION

The Wollongong City Council Emergency Response Procedures and Plans & Pollution Incident Response Plan is provided in APPENDIX A. The Plan includes procedures for evacuation, for flooding of entry and exit roads at the site (section 30.5), and for management of escape of leachate from the site (section 29.3).

# 1. Purpose/Scope

The Whytes Gully Waste Facility is a multipurpose facility that has a number of workers, Contractors and members of the public that will need to be managed should an emergency event occur.

The purpose of this emergency plan is to provide a framework which workers and occupants of this facility must utilise in the event of an emergency. The primary function of this plan is to preserve the safety and well being of all occupants. The secondary purpose of this plan is to minimise the possible damage to Council property as well as disruption to Council services. This plan forms part of the **Site Safety Management Plan for Whytes Gully Waste Facility.** 

The outlined response procedures within this document are to be implemented by all Council workers until the appropriate Emergency Services arrive or until such time as the emergency event has been controlled or threat has been removed.

Given the nature of this facility it will require more than one person to effectively evacuate the entire complex during an emergency. It is for this reason that this facility has a number of nominated emergency personnel who will be required to initiate specific responses in the event of an emergency. These nominated emergency personnel (workers) form the basis of the Local Emergency Control Organisation (LECO). See section 4 for names and contact details.

It will be necessary for Council workers of this facility to direct members of the public and any sub Contractors or visitors when a full evacuation of the facility is required.

The Whytes Gully Waste Facility consists of:

- Weighbridge & office;
- o Tip Face
- o Transfer Station
- o Staff Amenities
- Recycle collection area
- o Revolve Centre
- o Green Waste; Scrap Steel & e-waste collection area
- o Leachate Ponds
- Stormwater Ponds

Whytes Gully standard hours of operation are 07.30 – 16.30, 7 days per week

Page 4 of 65

# 2. What is an Emergency

An emergency is defined as any event that arises internally, or from external sources, which may adversely affect the occupants, visitors or the environment in a facility, and which requires an immediate response.

# 2A Types of Emergencies

The following is a list of all the emergencies that could potential occur at Whytes Gully Waste Facility. Each identified emergency event has been allocated a colour code. This colour code is to be utilised when communicating to fellow workers the emergency event and/or when announcing the emergency. All occupants of Whytes Gully Waste Facility and any other council workers at this facility must be familiar with these codes and what they represent. This is to avoid any confusion, unnecessary panic and to act as a trigger for the initiating of the required response.

.This document outlines the response procedures for Whytes Gully Waste Facility for the listed emergency types:

- Evacuation Code ORANGE
- Fire/Smoke Code **RED**
- Bomb Threat Code **PURPLE**
- Medical Emergency Code **BLUE**
- Personal Threat Code **BLACK**
- Internal Emergency Code YELLOW
  - Loss of Power to Facility (Lighting and Air Conditioning)
  - Loss of Power to Facility (Phones)
  - Loss of Communication (mobiles/landline/PC's)
  - Loss of Water to Facility
  - Sewage Blockage/Flooding (septic)
  - Vehicular Accidents
  - Illegal Occupation
- Pollution/Environmental Emergency Code GREEN
  - Fires in Waste
  - Spill of Hazardous Material
  - Escape of Leachate from site
  - Emission of Gas from the Landfill
- External Emergency Code **BROWN** 
  - Bushfire
  - Earthquake
  - Explosion or industrial accident (adjoining industries)
  - Toxic Emissions or Substance Spills (adjoining industries)
  - Flooding (including entry and exit roads)
  - Severe Weather Conditions ie Winds, Storm Surges, Lightning Storm, Cyclone
  - Transport Incident on road or railway track

Adoption Date	01/09/2012	Version	01

#### Page 5 of 65

#### **3.** Local Emergency Control Organisation (LECO)

The following table identifies personnel that shall be contacted in the event of an emergency. The listed persons form the Local Emergency Control Organisation (LECO) for this facility.

The LECO is responsible for the development, documentation, implementation and maintenance of this emergency plan and the associated response procedures.

Position	Name	Speed	Mobile No:	Ext	Location
		Dial		No:	
Chief Warden	David Storm		0419-495633		
Deputy Chief Warden	Guy Menagh		0407213744		
Deputy Chief Warden					
Emergency Warden	Col Ketteringham		42609857		
Emergency Warden	Frank Hughes		0423675333		
Emergency Warden					
First Aid Officer/s	Frank Hughes		0423675333		
	Mick Murphy				
Controller of Premises	Wayde Peterson		0408-751-199		
After Hours Emergency					
Council's After Hours	Ask for Waste				
Service Company – Well	After Hours Duty		1300 557 980	4227 7111 Option 1	
Done	Officer				

All of the above listed positions have a key role to play in the event of an emergency. The key functions of the LECO in the event of an emergency include:

- Conduct an orderly evacuation of all occupants to the nominated assembly area and
- Assist Emergency Services personnel upon their arrival to the facility

Council workers, other occupants, official visitors, volunteers, contractors and members of the public shall obey all instructions/directions given to them by any of the above listed personnel in the event of an emergency.

#### The Chief Warden has overriding authority of the facility until the arrival of Emergency Services and all occupants in the event of an emergency. This authority is also extended to the Deputy Chief and the Emergency Wardens.

The LECO have been allocated coloured tabard/s that they must wear in the event of an emergency or a simulated exercise. The tabards will assist in the quick identification of these workers by members of the public and Emergency Services. The identification tabards are:

Chief Warden – white tabard with red lettering Deputy Chief Warden – white tabard with red lettering Emergency Warden – red tabard with white lettering First Aid Officer – green tabard with white cross and white lettering

The facilities LECO will meet **yearly**. All meeting minutes will documented (in line with corporate template).

Meeting minutes to be forwarded to the Corporate Emergency Control Organisation (CECO).

#### Page 6 of 65

Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

All LECO members will be trained to develop the skills and knowledge necessary to competently undertake the duties as set out within this plan. Refresher and/or retraining shall occur at intervals no greater than 6 months.

Review dates, staff training schedules to be included on the Inspection and Testing Register & Matrix.

Evacuation Emergency plan to be tested annually and within 1 (one) month of any incident occurring where the plan has been activated.

If an after hours emergency occurs, the following After Hours Company/s that carries out security patrols and alarm monitoring should also be notified.

# 4. Evacuation – Code Orange

Evacuation is the orderly movement of people from a place of danger.

The evacuation of Whytes Gully Waste Facility is to occur once an emergency has been identified and there is a potential risk to the heath and safety of any persons.

Within this facility the stages of evacuation are:

**Stage 1:** Remove any person/s away from the immediate vicinity of the danger, if safe to do so. This movement can be to another room, into a hallway or corridor.

**Stage 2:** Move all persons to a safe compartment. This can include beyond a smoke or fire rated door which is located on the same floor/level or the floor/level below.

Full evacuation of all persons from Whytes Gully Waste Facility.

This requires all persons to follow the directions of the Chief Warden or the Deputy Chief Warden or the Emergency Warden. Persons are to attend the nominated assembly area which is the main entrance to the facility - front gates at Whytes Gully or to the alternate assembly area - gate entry to Glengarry eastern carpark (south side of transfer station).

In some instances the Chief Warden will be required to select an alternate assembly area to that which is previously nominated. Should such set of circumstances occur, the Chief Warden will inform all persons at the time of the evacuation or, if possible, prior to the evacuation.

The Chief Warden will contact Council staff (Weighbridge, Transfer Station, Tip Face & Amenities) and contractors (Revolve Centre, Scrap Steel, Green Waste area, Ammonia Plant) via two way radio and/or 'drive through' the waste site and instruct staff to gather in the meeting room. An explanation of the emergency will be given to the staff and instructions given to evacuate to the assembly area. Staff to take their personal belongings and keys only if safe to do so. Staff and Visitors to follow the direction of the Chief Warden who will direct them to one of the 2 designated exits.

The Emergency Warden/s to act as a directional monitor to guide visitors, staff and contractors to the correct exit. The Wardens to carry out sweep of entire site if safe to do so.

The Deputy Chief Warden shall ensure that all occupants have been evacuated. The Emergency Warden/s should be the last to evacuate their designated area. Prior to evacuating the Emergency Warden is to contact the Chief Warden and state that their area is "clear" or outline why the area is not clear. Stating that the area is clear means that there are no persons left.

No person, worker or otherwise, is permitted to re-enter the facility once they have exited. Persons can only re-enter the facility once the direction has been given to do so by the Chief Warden or by the officer-in-charge of the Emergency Service in attendance.

Council workers shall remain in the nominated assembly area until otherwise advised that they can leave the assembly area or have been directed to return to the facility.

Where possible Emergency Warden/s shall conduct a roll call/head count and report the results of this roll call to the Chief Warden verbally or via mobile phone.

Page 8 of 65

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

First Aid Officer/s are to make available first aid provisions and provide first aid treatment where required by way of a mobile first aid kit.

Chief Warden to meet emergency authority or combat agency to advise of situation.

The Chief Warden shall undertake a documented debrief following all emergency events. The debrief shall occur as soon as practically possible after the *all clear* has been given and the emergency has been controlled.

NOTE: In an emergency event the intent is to evacuate occupants as *quickly* as you can via any available exits. Once evacuated the occupants are to proceed to the facilities nominated assembly area.

In the event of evacuating due to a bomb threat, occupants shall proceed to the announced assembly area (this may vary from the primary and secondary assembly area) via a specified path of egress.

## 8. Authority to Evacuate

The initial decision for full evacuation of this facility is to be made by the Chief Warden or the Deputy Chief Warden. In their absence, the nominated Emergency Warden can make this determination.

In the absence of any nominated emergency wardens and no automated emergency warning systems the decision for a total evacuation (stage 2) of **Whytes Gully** can be made by the attending Emergency Services.

The Chief Warden, Deputy Chief Warden and Emergency Wardens will act upon any directions issued to them by the attending Emergency Service.

The Deputy Warden to ensure that a roll call is undertaken at the Assembly Area.

The Chief Warden to nominate where the control point is going to be, if it is not going to be the Whytes Gully weighbridge.

If unable to return to Whytes Gully after the Evacuation, staff and visitors to be instructed to leave the assembly area and if possible take their cars out of the carpark and go home.

The Deputy Chief Warden to record time staff and visitors left the premises and their contact details for further notification or update on the emergency if required, and to advise when they can return to the premises.

# 9. All Clear

Under no circumstances are evacuated persons allowed to re-enter the facility until given the "All Clear".

The "All Clear" can only be given by the Officer in Charge of the attending Emergency Service.

The "All Clear" will then be given to the Chief Warden who will then advise the Emergency Wardens to direct workers (and any other persons) back into Whytes Gully.

The Chief Warden must directly advise each individual Emergency Warden of the "All Clear".

# **10. Responsibilities of the Chief Warden -** (white tabard)

The Chief Warden at Whytes Gully will be the Council nominated Officer in Charge in the event of an emergency. The primary duty of the Chief Warden is to ensure the safety of the occupants and the orderly evacuation of the facility.

The **Chief Warden** is responsible for:

- The facility and all its occupants in the event of an emergency.
- The overall development, implementation and maintenance of all emergency response procedures, plans and diagrams.
- The overall implementation and maintenance of all emergency protection systems and emergency control equipment.
- The implementation and coordination of emergency response procedures, plans and systems in the event of an emergency.
- The establishment of a primary assembly area and an alternate assembly (including secret assembly area).
- The preparedness and training of the responsible emergency personnel. This includes ensuring that all members of the LECO are suitably trained and qualified.
- Providing every occupant, at the facility, with the relevant instructions relating to all emergency procedures and the role the occupant will have in the event of an emergency.
- Ensuring that all occupants of the facility have read this document and know where it is located and how to access it.
- Ensuring that all occupants have access to Council's Emergency Procedures Guide (flipchart).
- Ensuring that all Hazardous Substances/materials or Dangerous Goods are stored safely and in line with best practice principles and legislation.
- Maintaining a current Substance Register and/or Dangerous Goods manifest.
- Ensuring that the substance register/ DG manifest is made available to the attending emergency service upon request.
- Liaising with the Emergency Services and other WCC personnel in the event of an emergency.
- Ordering the full evacuation (stage 2) of the facility.
- Provide "all clear" notification to Emergency Wardens or in their absence directly to employees and occupants for the safe return to the facility.
- Conducting a simulated emergency exercise at least once in any given 12 month period.
- Conducting a documented debrief session following every emergency event whether that emergency event is real or simulated.
- Identify corrective action following emergency event debrief.
- Implementing corrective action as soon as practically possible following the emergency event.
- Communicating the implemented corrective action to LECO members and occupants of the facility.
- Completion of Personal Emergency Evacuation Plans (PEEP)
- Document all relevant details during the emergency event.

# 11. **Responsibilities of the Deputy Chief Warden -** (white tabard)

The **Deputy Chief Warden** is responsible for:

- Assuming the role of Chief Warden and the position's responsibilities in the absence of the Chief Warden plus:
  - Assisting the Chief Warden in the event of an emergency.
  - Notifying the Chief Warden in the event of an emergency at the facility.
  - Coordinating the directions of the Chief Warden to the Emergency Warden/s and First Aid Officer/s.
  - o Assisting in the overall development, implementation and maintenance of:
    - Emergency response procedures
    - Emergency protection systems and
    - Emergency control equipment.
- Participate in all emergency event debriefing sessions.

# 12. Responsibilities of the Emergency Warden - (red tabard)

The Emergency Warden is responsible for:

- Initiating established emergency response procedures relevant to their area of responsibility.
- Conducting regular checks of their area for any potential hazardous situations.
- Notify the Chief Warden and/or Deputy Chief Warden in the event of an emergency at the facility, detailing what the emergency is and what actions, if any, have been taken.
- Following the directions given to them by the Chief Warden and/or the Deputy Chief Warden eg commence search for suspicious object/s, stop person from using lifts etc.
- Having a sound knowledge of:
  - The layout of their area of responsibility
  - The location of all designated emergency exits, safe compartments and all designated emergency paths of egress.
  - The location and how to use all emergency protection systems and emergency control equipment.
- Calmly and effectively removing all persons from the immediate danger area.
- Calmly and effectively directing all persons from the immediate danger area to a safe compartment.
- Calmly and effectively direct all persons from the facility to the nominated assembly areals to ensure that occupants **do not** carry any bulky items, food or drink during an evacuation.
- Knowing the location of all person/s with a disability in their area of responsibility.
- Assisting occupants with disabilities in the event of an emergency.
- Ensure that their designated area has completely evacuated. They are required to carry out a final inspection prior to them evacuating. **Note:** The Emergency Warden must be the last to leave their designated area of responsibility.
- Informing the Chief Warden and /or Emergency Services of anyone who has refused to evacuate the facility
- Inform Chief Warden and/ or Emergency Services of any person/s with disabilities, that are unable to evacuate and their exact location within the facility.
- Ensuring that emergency exits, fire/smoke doors and windows are properly closed behind them as they evacuate their designated area.
- Accompanying evacuees to the nominated assembly area and awaiting further instructions.
- Conducting an accurate role call at the assembly area and report any abnormalities to the Chief Warden or Emergency Services.
- Ensuring that no one re-enters the facility.
- Reporting the status of their area and the action taken to the Chief Warden or the Emergency Services.
- Assisting the Chief Warden and Deputy Chief Warden/s in carrying out their duties.
- Assisting in the overall development, implementation and maintenance of:
  - Emergency response procedures
  - Emergency protection systems and
  - Emergency control equipment.
- Participating in all emergency debriefing sessions.

#### Page 16 of 65

# **13. Responsibilities of the First Aid Officer -** (green tabard)

First Aid Officer/s are to ensure that they:

- Initiate established emergency response procedures in the event of an emergency.
- Maintain their qualifications in order to perform their role as a First Aid Officer.
- Provide First Aid treatment to any persons requiring assistance.
- Recommend and initiate the assistance of advanced medical service providers as required ie call an ambulance or arrange transport for an injured or ill person to a hospital or other medical facility.
- Maintain first aid provisions ie ensure allocated First Aid Kits are re-stocked after use.
- Record details of each person that receives treatment. In instances where the casualty is referred for further treatment, the First Aid Officer is to provide information relating to treatment the casualty has already received to the advanced medical carer.
- Are familiar with Council's First Aid procedure.
- Take an active role in the development, implementation, maintenance and review of Emergency Procedures at the facility.

### 14. Responsibilities of Security Staff - After Hours Only (When responding to an alarm or when on regular patrol after hours)

- Inform all persons (if any) in the immediate area verbally (calmly **do not shout**) to evacuate building and to wait at Assembly Area at Eastern end of Carpark.
- Security staff to contact relevant Emergency Service from his mobile or by landline by dialling 000.
- Security staff to contact Council's after hours service, Well Done 4227 7111, option 1, or 1300 557 980 who will contact relevant after hours waste staff on duty who will in turn contact the Chief Warden/Controller of Premises.
- Security staff to notify their Manager or staff at Southern Cross Protection 1300 136 102, Branch Manager, Hugo Marais, 0478 313 825 of situation.
- Meet Emergency personnel and Council staff on site.
- Take instructions from the relevant Emergency Services personnel and Emergency Warden or Council officer.
- Liaise with persons (if any) in Assembly Area to keep them up to date and for reassurance.

Page 17 of 65

# 15. Responsibilities of all Workers / Occupants

Council workers and/or occupants that do not have a specific role to play in the event of an emergency are to:

- Follow the directions given to them by the Chief Warden, Deputy Chief Warden and/or the Emergency Warden/s
- Assist any of the LECO in the execution of their duties
- Leave the facility in an orderly manner
- Go to the nominated assembly area
- Remain in the nominated assembly area until advised by the Chief Warden or by the attending Emergency Service personnel
- Ensure they have access to Council's Emergency Procedures Guide ie flip chart
- Provide guidance and assistance to members of the public and any other persons, which might be at the facility at time of the emergency.
- Attend regular training and information sessions relating to the emergency response procedures for Whytes Gully.
- Participate in the undertaking of emergency exercise/s
- Know the location and types of fire fighting equipment, fire alarms and/or warning system for this facility.

# Any worker who fails to comply with their workplace health and safety obligations and responsibilities, as outlined above, could face disciplinary action and/or prosecution.

Fire prevention is the responsibility of all workers and occupants of this facility. Any potentially hazardous situation must be reported to your immediate supervisor/manager, the facility's Chief Emergency Warden and, in their absence, the Deputy Chief Warden as a matter of urgency.

Typical hazardous situations for workers and occupants to look out for are:

- Accumulation of disused paper, furniture, litter/waste, dust or other items
- Faulty electrical wiring or appliances
- Overloading of power outlets
- Obstructions in designated paths of egress, exits and access areas
- Obstruction of fire fighting equipment and emergency signage
- Missing or untested fire fighting equipment
- The propping open or obstruction of fire or smoke doors
- The misuse of emergency equipment
- The storage of any items in emergency evacuation stairwells and designated emergency store points.
- Ongoing leaks or spills of substances
- Damaged or defective emergency equipment

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

Page 18 of 65

### 16. Persons who refuse direction

During an emergency event, whether that emergency is real or simulated, should any worker refuse to evacuate the facility or refuse to comply with a direction given to them by the designated Emergency Warden, they shall be reported to the Chief Warden. The report being provided shall contain information such as:

- Who the worker is
- Where the incident occurred
- What time the incident occurred
- Acknowledgement that the worker understood the direction
- The reason (if any) that the worker has given for refusing the direction
- Confirmation that the worker was given the direction to evacuate twice by the Emergency Warden

Upon receipt of the Emergency Warden's verbal report, the Chief Warden shall provide the exact same information to the Officer in Charge of the attending emergency services.

Once the emergency event has been controlled and the **all clear** has been provided, the refusal is to be tabled at the debrief. Following this debrief, the refusal is to be reported to the General Manager. Disciplinary action may be taken against the worker in accordance with Council's Disciplinary Procedure.

Where a member of the public or visitor to the facility refuses to evacuate or follow the direction given to them by the emergency warden, the following steps are to be initiated:

- The Emergency Warden is to repeat the direction to evacuate twice
- Ascertain the name of the individual
- Note where the incident occurred
- What time the incident occurred
- Provide all information to the Chief Warden

Upon receipt of the Emergency Warden's verbal report, the Chief Warden shall provide the exact same information to the officer in charge of the attending emergency services.

Once the emergency event has been controlled and the **all clear** has been provided, the refusal is to be tabled at the subsequent debrief.

Page 19 of 65

# 17. Raising the Alarm

When an emergency event is occurring at this facility during normal hours of operation, the alarm can be raised by following these steps.

- 1. Informing all persons in the immediate area verbally (calmly and **do not** shout).
- 2. Contact the relevant emergency services by **000** on a land line or from a mobile by dialling the primary emergency number **000** or the secondary emergency number **112**.
- 3. Text emergency message to **106** from a mobile phone
- Notifying the Chief Warden David Storm mobile 0419-495633 or, in their absence, the Deputy Chief Warden Guy Menagh – mobile 0407-213744 Informing your immediate supervisor/manager Wayde Peterson – mobile 0419-495633
- 5. Contact security Company Southern Cross Protection 1300 136 102, or Branch Manager, Hugo Marais, 0478 313 825.

In the event that an emergency is occurring at this facility outside of the normal hours of operation, the alarm can be raised by following the above stated steps.

It is important to note that dialling **000** is the primary emergency number whether using a landline or a mobile phone. The option of using **112** on a mobile phone is possible when a person finds themselves in a situation where they are unable to use a landline and that they are using a mobile that is not their own or is out of the normal service provider's range or has no credit available or has a password block.

In circumstances where a person is unable to communicate the emergency event verbally to the relevant emergency service, the event can be notified to emergency services by texting a message to **106**.

In the event an emergency occurs outside of normal business hours the following steps are to be implemented.

- 1. Informing all persons in the immediate area verbally (calmly and **do not** shout).
- Contact the relevant emergency services by dialling [0 000] on a land line or from a mobile by dialling the primary emergency number 000 or the secondary emergency number 112.
- 3. Text emergency message to **106** from a mobile phone.
- Notifying Council's After Hours Service Company Well Done 4227 7111 Option 1 (primary) or 1300 557 980 (secondary) to notify Waste staff on after hours duty.
- 5. Informing your immediate supervisor/ or facility manager **Wayde Peterson 0408-751-199**
- 6. Contact security Company Southern Cross Protection 1300 136 102, or Branch Manager, Hugo Marais, 0478 313 825

Page 20 of 65

### 18. Persons with Special Needs

The person with a disability is to alert waste depot operative who must notify the Chief Warden via two way radio/ phone of the situation. The person with a disability is to wait at the site if safe to do so until the person nominated by the Chief Warden or Deputy Chief Warden arrives to assist the person with special needs to exit the site. The person with special needs will be assisted from the premises by a person nominated by the Chief Warden or Deputy Chief Warden or Deputy Chief Warden. This staff member to stay with the person with special needs at all times

#### For future Reference

If there is an employee that has special needs a <u>Personal Emergency Evacuation Plan</u> (PEEP)- see form in Section 33 shall be developed for each of the identified workers with a disability. Guidelines for such a plan are included in Councils Developing Emergency Procedures procedure. The completed PEEP should be included in a readily identifiable section of the facilities documented procedures plan allowing easy access for the Chief Warden

The Chief Warden to have at hand a list of all workers names and their locations. Updated information can be obtained from the daily Location Board in the Hall.

Key points:

- Workers with a disability are **not** to be left alone during an emergency. An Emergency Warden (or another worker) is to be given the responsibility to stay with the person to provide comfort and reassurance until such time as the emergency event is over or until emergency services personnel arrive.
- Person/s with a disability are to be placed in an area that has a fire/smoke rating. Safe area or holding area is to be identified and stated in the plan for the facility.
- During an incident requiring a site evacuation, an "<u>evacuation check-list</u>" could include provision to record details of any PEEP occupant (for assisting in occupant accounting procedures.)
- Consideration is to be given to the type of occupants and visitors who, for one reason or another may need assistance in an emergency.
- A list of worker/s names and their location is to be developed and kept where the Chief Warden exercises control during an emergency ie control room.

### **19.** Management of Contractors and Official Visitors

All contractors, official visitors and meeting participants vehicles are electronically logged into the site and must sign in and out of the site via the log kept at weighbridge

Outline in detail what steps are to be taken with Contractors and Official Visitors that are at your site in the event of an emergency.

All visitors are to be inducted as per the Site Safety Management Plan. This induction to include location of emergency exits, general site layout, location of emergency control point and assembly area.

The Chief Warden to instruct occupants/staff and contractors and Visitors to proceed to the Assembly Area

The Emergency Warden to bring with him the Visitor's Book to use for a roll call and a list of all staff that are stationed at Whytes Gully. List of staff on site for the day is located on daily toolbox meeting register and staff vehicles are logged into/out of the site.

Page 22 of 65

### 20. Fire and/or Smoke – Code RED

In an emergency that involves fire or the identification of smoke, all workers are to remain calm and apply **RACE**.

**R** – **Remove** any person/s from immediate danger

- A Announce the presence of danger by:
  - Where available, activate automated system ie break glass alarm (BGA). In instances where the emergency has been notified to the Fire Brigade via the activation of an automated system, a telephone call to the Fire Brigade is to be made so as to confirm their receipt of the alarm and to allow for further information to be provided to the Emergency Services
  - Dialling 0 000 from a landline or from a mobile by dialling the primary emergency number 000 or secondary emergency number 112 (or text message to 106) and request the Fire Brigade. In a clear and calm voice state:
    - Type of emergency Fire/Smoke
    - Your name
    - Location of emergency Whytes Gully Waste Resource Recovery Park
    - -Nearest cross street West Dapto Road, Kembla Grange
    - Details of any action undertaken
    - Number of casualties and any information about the casualties
    - Any other hazards in the area
    - Be prepared to answer any questions the emergency operator asks you
    - Wait on line until the emergency operator tells you to hang up
    - Follow evacuation process
    - Notify all persons in the immediate area
- **C Contain** the fire/smoke by closing all windows and doors as you exit the immediate area
- **E Evacuate** the facility/workplace **or**
- **E Extinguish** the fire if you are trained and if it is safe to do so.

#### NOTE:

Where a full evacuation has been undertaken you must go to your nominated assembly area and await further instructions.

Attend debrief session if you have been directed to do so.

The **RACE** procedure can be used in any order taking into consideration the progression of the emergency.

You must **NOT** turn off internal lights as you exit the building You must **NOT** lock doors as you exit the building You must **NOT** take unnecessary risks

#### Page 23 of 65

### 21. Bomb Threat – Code Purple

In an emergency that involves a bomb threat (whether that be substance bomb or any other type), all workers are to remain calm and apply the below steps that are relevant to the threat type. All bomb threats are to be treated as a real threat until such time as the threat has been assessed and a different determination is made.

When any type of bomb threat emergency occurs, Emergency Warden/s will be required to carry out a search of their designated area. In some circumstances it may be deemed necessary to recruit the assistance of other workers/occupants of the area in order for a more thorough search to occur. The reason for using workers/occupants is that they are more likely to identify an item that is out of place or unusual for that area.

During the actual search, workers/occupants are **not** to touch anything. They are only required to visually inspect their area. Areas, rooms and/or cubicles that have been checked are to be clearly marked by using chalk and writing "**area clear**" on the floor at the point of entry.

The search will be conducted in the following manner:

- 1. Carry out the search whilst exercising the utmost care
- 2. Remove any hand held radio transceivers and mobile phones from your person whilst carrying out the search
- 3. Enter the area and listen for any unusual sounds
- 4. Enter the area to the left side and search in a clockwise direction
- 5. Check the area systematically by looking from
  - a. floor to waist level
  - b. waist to head level
  - c. head to ceiling
- 6. Look for anything that :
  - a. Matches the item described in the threat
  - b. Appears out of place or unusual
  - c. Has no identifiable owner or markings
  - d. Is of an unusual size or shape
  - e. Has a sound emanating from it
- 7. Mark on the floor that the area is clear or mark that the area has been identified as having a suspicious item

A sticker or paper with the words "room checked" is to be placed in all rooms that have been checked, preferably on the doorway. The suspicious item is to be marked with make- shift signage using arrows and appropriate wording and hung in the vicinity of the suspicious item and a paper trail laid to provide easy guidance to that location from the entry point.

# The process of marking should only be undertaken if time frames relating to the incident threat are deemed adequate.

#### NOTE:

Areas within this facility that are accessed by the public are **not** to be searched while the members of the public are present.

### NOTE:

Page 24 of 65

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

Upon receipt of a Bomb Threat the Chief Warden in consultation with relevant persons shall determine what action is to be taken. The options available are:

- 1. Do nothing and dismiss the threat
- 2. Undertake and immediate search and if a suspicious item is found evacuate the facility
- 3. Immediately initiate a stage 3 full evacuation of the facility

### NOTE:

When evacuating due to Bomb Threat, occupants are to take personal items with them but only where it has been deemed safe to do so. Occupants are then required to exit safely via the predetermined path of egress.

### 22 Telephone Threat

Should you receive a telephone threat the following actions shall be initiated.

- 1. Remain Calm
- 2. **DO NOT** hang-up the phone, from which the threat was received, at anytime until directed to do so by the Chief Warden.
- 3. Access the "telephone threat checklist" and complete as much of the document as you can. This checklist is located at the end of this document as well as being on the back of every WCC Emergency Procedures "flipchart" Guide. Every worker and/or occupant of this facility is to have easy access to the "flipchart" guide.
- 4. Try and keep the caller on the line for as long as you can and ask as many of the listed questions as possible.
- 5. Try and get the attention of the nearest worker so that they can contact the Chief Warden.
- 6. If you are unable to obtain assistance from an worker you must contact the Chief Warden immediately after the caller has cut off communications with you.
- 7. Contact your immediate Supervisor/Manager and inform them of what has happened.
- 8. Finish completing the telephone threat checklist
- 9. Hand the completed checklist to the Chief Warden or, in their absence, your Supervisor/Manager
- 10. Attend debrief session if required.

If you are the only worker/occupant of the facility at the time of receiving the call you must notify the emergency services by dialling **0-000** from a landline or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Police(and where deemed appropriate the NSW Fire Brigade)
- Type of emergency Bomb Threat
- Your name
- Location of emergency Whytes Gully Waste Recovery Resource Park
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when they attend the facility

### 23 Written Threat

Should you receive a written threat the following actions are to be initiated.

- 1. Remain Calm
- 2. Avoid any unnecessary direct handling of the document.
- 3. If you are able to, place the document in a clear plastic container.
- 4. Contact the Chief Warden.
- 5. Contact your immediate Supervisor/Manager and inform them of what has happened.
- 6. Attend debrief session if required.

If you are the only worker/occupant of the facility at the time of receiving the written threat you must notify the emergency services by dialling 0 - 000 from a mobile by dialling the primary emergency number 000 or secondary emergency number 112. In a clear and calm voice state:

- Emergency service required Police
- Type of emergency Bomb Threat
- Your name
- Location of emergency Whytes Gully Waste Recovery Resource Park Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when the attend the facility
- Be prepared to answer any questions the emergency operator asks you
- Wait on line until the emergency operator tells you to hang up
- Follow evacuation process

Page 27 of 65

### 24 Identification of suspicious item or receiving suspicious mail

There are many varying types of objects or methods that can be used in order for a bomb threat to be carried out. Emergency Warden/s, workers or occupants of the facility that carry out a search for a suspicious object or if they receive a suspicious object, should be looking for these key identifiers:

- The item seems out of place for the area or doesn't appear to belong there
- The item can not be accounted for
- The item appears excessive in weight for its size
- The item appears lopsided or uneven
- The item contains loose or powdery materials
- The item is covered with, or secured with, excessive amounts of tape or any other binding material
- The item being received is from an unknown or unusual source
- The item has wires or any other metallic objects protruding from it
- The item is covered with excessive postage
- The item was not expected
- The item can not be identified from the packaging
- The sender's details are not on the packaging
- The details on the packaging are hand written and/or poorly written
- The information on the packaging is misspelt
- There is no return address

Should you identify a suspicious object, the following actions are to be initiated.

- 1. Remain Calm.
- 2. Do not touch, handle or move the suspicious item.
- 3. If you are able to do so, place a marker near the suspicious item. This marker will assist the Emergency Services in locating the item once the building has been evacuated.
- 4. Clear/evacuate all persons from the immediate area.
- 5. Secure the area.
- 6. Contact the Chief Warden by way of landline or if possible in person and inform them of what you have identified and what marker you used.
- 7. Contact your immediate Supervisor/Manager and inform them of what has happened.
- 8. Await further direction.
- 9. Attend debrief session if required.

**NOTE:** If you receive suspicious mail and you have doubts as to the stability of the package, you should contact the addressee and seek clarification as to the package and its contents.

If the contents of the package appear to be a powder or some other type of substance and the addressee and/or the contents can not be confirmed, the recipient is to follow the below steps.

- Remain calm.
- Stay in the immediate area.

Page 28 of 65

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

- Place another container over the mail or place the mail in another package (but only if safe to do so).
- Stop others from entering the area.
- Immediately contact Chief Warden and your supervisor/manager.
- Await further instructions.
- **Do Not** disturb the item.
- **Do Not** pass the item around.
- **Do Not** attempt to clean up any of the substance that has exited the package.
- **Do Not** attempt to brush the substance off your clothing.
- Do Not touch your eyes, mouth or nose (even if you have washed your hands).

If you are the only worker/occupant of the facility at the time of identifying or receiving the suspicious object/mail, you must notify the emergency services by dialling 0 - 000 from a mobile by dialling the primary emergency number 000 or secondary emergency number 112 (or text message to **106**).

In a clear and calm voice state:

- Emergency service required Police
- Type of emergency Bomb Threat
- Your name
- Location of emergency Whytes Gully Waste Recovery Resource Park Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable) _

### 25 Medical Emergency – Code Blue

Where possible and depending upon the medical emergency the workers are to always use personal protective equipment when performing first aid.

The steps that are to be initiated in a medical emergency are:

- The employee who identifies the medical emergency is to check for danger to themselves, the casualty and anyone else who is in the immediate area
- The rescuer must maintain his/her personal safety at all times.
- Ascertain whether casualty is in any immediate or further danger
- Do not remove casualty if no danger exists
- Remove casualty from immediate danger only if safe to do so.
- Check for response by talking to the casualty
- If no response provide first aid by treating the casualty's condition (to your level of knowledge and ability). Follow Basic Life Support Flow Chart.

## **BASIC LIFE SUPPORT FLOW CHART**

- **D** = Check for **DANGER** / Safety to yourself and the casualty If it is safe to do so, remove the casualty from immediate danger
- **R** = Check **RESPONSE**.

Check for a response by talking to the casualty in a loud and clear voice

No signs of life = no response (unconscious), not breathing normally, not moving

- **S** = **Send** for help. Call or ask a bystander to phone 000 for emergency services
- **A** = Clear and open **AIRWAY** and check for signs of life.
- **B** = **BREATHING** normally if yes place in recovery position. If no, commence compressions
- **C** = Give 30 chest **COMPRESSIONS** at 100 per minute, followed by 2 breaths. Continue by repeating CPR until advance medical assistance arrives or casualty becomes responsive (breathing normally).
- **D** = **DEFIBRILLATE** attach AED (Automated External Defibrillator) as soon as it is available and follow the audible prompts of the AED
- Notify First Aid Officer
- Contact advanced medical (ambulance) emergency services by dialling 000 or 112 from a mobile and in a clear and calm voice state:
  - Emergency service required Ambulance
    - Type of emergency Medical
    - Your name
    - Location of emergency Whytes Gully Waste Recovery Resource Park
    - Nearest cross street West Dapto Road, Kembla Grange

Page 30 of 65

- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when the attend the facility
- Be prepared to answer any questions the emergency operator asks you
- Wait on line until the emergency operator tells you to hang up
- Remain with casualty until such time as advanced medical assistance arrives.
- Notify person/s in the immediate area
- Report the emergency to your Chief Warden and your immediate supervisor/manager
- First Aid officer to nominate a staff member to meet ambulance at entrance Gate.
- If required First Aid Officer to request assistant from other staff who have their First Aid experience or from staff at Glengarry Cottage who are First Aiders.
- The First Aid Kit Kit Type 'B', is located in the amenities area & weighbridge, it can easily be transported to another location, it is not attached to the wall. The kit is equipped with basic supplies like various dressings and bandages, eye pads, eyewash, antiseptic swabs, rescue blanket, scissors and forceps.

Page 31 of 65

### 26 Personal Threat – Code Black

Procedure on the management of a personal threat needs to focus on the preservation of life in the first instance and property in the second.

It is recognised that it is not always possible to eliminate all forms of personal threats. The intent is to reduce the opportunities for the situation to arise and reduce potential for loss to workers and the organisation.

A personal threat can be in the form of a verbal and/or physical assault and can manifest into a psychological illness.

If armed confrontation or any similar type of personal threat occurs remember to be calm and think **SAFE**.

- **S** = **Safety**, which is your safety and those around you is a priority
- **A** = **Actions**, be open honest and compliant at all times
- **F** = **Focus**, on demands of the offender and your responses
- **E** = **Emotions**, stay calm and manage your emotions

All workers and/or occupants of this facility are required to:

- Remain observant at all times during the threat
- Keep a safe distance from the offender/s
- Obey offender/s instructions. Do exactly what they say (no more no less) and ensure that you advise the offender of what you are doing before you do it
- Put your hands up (shoulder level) to show that you are submitting to their requests
- Look down and away from the offender/s
- Avoid direct eye contact with the offender/s
- Stay calm and quiet
- If you cannot retreat or you are unable to leave the immediate threat area remain where you are until help arrives

If you are able to leave the facility or the immediate threat area, then do so. Once you have managed to leave the threat area you must raise the alarm by notifying the Police and if there are any casualties contact the Ambulance service. You can contact Emergency Services by dialling **0** -000 from a landline or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Police
- Type of emergency Personal threat / Armed hold-up
- Your name
- Location of emergency Whytes Gully Waste Recovery Resource Park
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action already undertaken
- Number of casualties and any information about the casualties (if applicable)
- Physical description of the offender/s
- The direction of the offender's on exit

Page 32 of 65

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

- Mode of escape
- Wait on line until the emergency operator tells you to hang up
- Remain in a safe area until such time as Police arrive.
- Report the emergency to your Chief Warden and your immediate supervisor/manager

Immediately after the offender/s have left the facility close off the area where the threat occurred. This can be done by locking internal doors. The need to isolate the area is to avoid contamination of the crime scene.

A sign "Closed Due To Emergency" is to be placed on the main entry gates once it has been locked.

Workers must:

- **Not** follow the offender/s as they leave the facility.
- Not allow unnecessary access to the area where the incident occurred.
- Ask all witnesses to remain until responding Police arrive.
- Advise witnesses **not** to discuss what they have experienced with each other or anybody else until the police have interviewed them.
- Not speak to the media.

All witnesses are to write down their observations, taking into consideration:

- Description of offender ie height, hair colour, eye colour, physical condition, obvious scars or any other distinguishing features.
- Sex
- Colour and type of clothing
- Speech
- Mannerisms
- Distinguishing or noticeable features, such as tattoos, facial hair
- Weapons used (if any)
- The mode of escape ie vehicle (type, make, colour)
- Direction of escape
- And anything else that could assist identifying the offender/s
- All witnesses to remain in the area
- Maintain integrity of the crime scene
- If necessary secure the area by closing access doors to the area and/or gate to the property.
- Provide medical assistance, if required. Use First aid provisions located in the kitchen.
- The most senior officer present is to initiate Emergency Response Procedure as soon as practicable.

# 27. "Lock Down" Procedure Relating to a Personal Threat

The intent of the "lock down" is to isolate the facility occupant/s from the threat in particular when an occupant in alone in the building. It I important that if an occupant is alone in the building, the back and front screen doors are to be 'clicked' into the lock position.

In the event of an intruder or of a hostile visitor who is threatening or who is trying to enter weighbridge office

Ensure all entry/exit doors are locked.

Contact Emergency Services by dialling **[0-000]** from a landline or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Police
- Type of emergency **Personal threat / Break-in**
- Your name
- Location of emergency Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action already undertaken
- Number of casualties and any information about the casualties (if applicable)
- Physical description of the offender/s
- The direction of the offender's on exit
- Mode of escape
- Wait on line until the emergency operator tells you to hang up
- Remain inside until such time as Police arrive.
- Report the emergency to your Chief Warden 0419-495633 or after hours 42277111 Option 1 or 1300557980 (as per the emergency procedures Guide)
- Report the emergency to your immediate supervisor/manager
- Stay in the building in lock down mode and await instructions from Police when they arrive.

### 28. Internal Emergencies – Code Yellow

Below are some examples of the types of internal emergencies that could be relevant for Whytes Gully Waste Resource & Recovery Park together with the planned response. It may be necessary to add additional scenarios in the future with changing circumstances.

- Structural Instability
- Loss of power (electricity)
- Communications failure (no phones, mobiles or PC's)
- Loss of water supply
- Flooding
  - o Water leak
    - Sewerage (septic system)
- Vehicular Accidents

### 28.1 Structural Instability

Structural instability damage to the Whytes Gully could include major structural damage to the building(s), which may include movement, or minor damage to walls, roof, windows or even collapse.

Basic outline of internal emergency response plan -

- Maintain your personal safety and of those around you at all times during the emergency event.
- Remove persons from the immediate threat if safe to do so.
- Isolate the immediate area.
- Prevent access to the affected area.
- Proceed with evacuation if deemed appropriate.
- Report the emergency to the Chief Warden and your immediate supervisor/manager and await their instruction.
- Contact Incident Report Hotline on 4227 7700 if calling after hours leave a message.
- Undertake a debrief session and ensure that the debrief is documented.

If required contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance
- Type of emergency –
- Your name
- Location of emergency Whytes Gully Waste Resource Recovery Park -Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when they attend the facility
- Be prepared to answer any questions the emergency operator asks you Page 35 of 65

Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

- Wait on line until the emergency operator tells you to hang up

# 28.2 Loss of Power (Electricity) lighting and communications

### a) Lighting

- Maintain your personal safety and of those around you at all times during the emergency event.
- Contact Operations manager & /or systems support to arrange generator to site for weighbridge
- Open all windows, doors to ensure maximum natural lighting.
- Prevent access to the affected area, if necessary.
- Contact Electricity Company to confirm if power is localised.
- Report the emergency to the Chief Warden and your immediate supervisor/manager and for their instruction.
- Proceed with evacuation if deemed appropriate.
- Advise Security Company of situation
- Undertake a debrief session and ensure that the debrief is documented

**Only if required**, contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance
- Type of emergency -
- Your name
- Location of emergency Whytes Gully Waste Resource Recovery Park -Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)

### b) Communications Failure (no IP phones or PC's)

- Maintain your personal safety and of those around you at all times during the emergency event.
- Use mobile phones if available to contact Council's Information Management section to determine extend of communications failure.
- Use mobile phones if available to Report the emergency to the Chief Warden and your immediate supervisor/manager for their instruction.
- Proceed with evacuation if deemed appropriate.
- Contact Incident Report Hotline on 4227 7700 if calling after hours leave a message
- Undertake a debrief session and ensure that the debrief is documented

**Only if required** contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance
- Type of emergency –
- Your name

- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)

### 28.3 Loss of Water Supply

- Maintain your personal safety and of those around you at all times during the emergency event.
- Isolate the immediate area
- Prevent access to the affected area
- Contact the Local Authority to determine cause and duration of loss of water.
- Proceed with evacuation if deemed appropriate.
- Report the emergency to the Chief Warden and your immediate supervisor/manager for their direction.
- Contact After Hours Services
- Contact Incident Report Hotline on 4227 7700 if calling after hours leave a message
- Undertake a debrief session and ensure that the debrief is documented

**Only if required**, contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance

- Number of casualties and any information about the casualties (if applicable)

### 28.4 Flooding (water & sewerage)

### a) Water Leak

- Maintain your personal safety and of those around you at all times during the emergency event.
- Remove persons from the immediate threat if safe to do so.
- Isolate the immediate area.
- Prevent access to the affected area.
- Proceed with evacuation if deemed appropriate.
- Contact Council's Building Maintenance to arrange for a plumber to attend.
- Report the emergency to the Chief Warden and your immediate supervisor/manager and await their direction.
- Contact Incident Report Hotline on 4227 7700 if calling after hours leave a message
- Undertake a debrief session and ensure that the debrief is documented

- Number of casualties and any information about the casualties (if applicable)

### b) Sewerage (septic system)

- Maintain your personal safety and of those around you at all times during the emergency event.
- Remove persons from the immediate threat if safe to do so
- Isolate the immediate area
- Prevent access to the affected area
- Isolate the area using tape
- Proceed with evacuation if deemed appropriate.
- Contact Council's Contractor to arrange for emptying of the tank.
- Report the emergency to the Chief Warden and your immediate supervisor/manager for direction.
- Contact Incident Report Hotline on 4227 7700 if calling after hours leave a message
- Undertake a debrief session and ensure that the debrief is documented

**Only if required**, contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)

Page 38 of 65

### 28.5 Vehicular Accidents

Staff witnessing a motor vehicle accident on site must notify the Chief Warden

- see if anyone is injured and arrange for first aid assistance or ambulance as appropriate
- contact the police if deemed appropriate
- make written records of witness's statements
- note accident in the site diary.

**Only if required**, contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance
- Type of emergency -
- Your name
- Location of emergency Whytes Gully Waste Resource Recovery Park -Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)

### 28.6 Illegal Occupation

If intruders occupy the premises, the following steps should be followed:

- Inform personnel of the emergency.
- Assist and obey the intruders. Do not resist or provoke them.
- As soon as it is safe, dial 000 and call the police.
- Where phone lines may have been cut and an alarm system/guard is available, activate it.
- Write down as much information as possible in regard to physical appearance, outstanding characteristics, dress, voice, behaviour and actions of intruder. What did they do, say and touch?
- Write down the escape direction, vehicle description and registration and follow up with the Chief Warden.

#### Page 39 of 65

Adoption Date	01/09/2012	Version	01

### 29 Environmental Emergency - Code Green (& Pollution Response Plan)

### 29.1 Fires in Waste (Tip Face)

The person identifying the fire should, if feasible and safe, attempt to extinguish it immediately. If it is not feasible or not successful, the Chief Warden must immediately be notified.

The Chief Warden notifies the fire brigade and the takes control of the fire fighting effort until the fire brigade arrives. Measures taken may include the following:

- extinguishes all flames with the water cart or fire fighting equipment
- isolating the source of fuel using mobile plant if it is safe to do so.
- shutting off power supply to affected areas as appropriate
- using portable fire extinguishers and cover material as appropriate.

If the fire is serious enough that emergency services has to be called (police, rescue, ambulance or SES) the Chief Warden hands control over to the officer in charge and briefs him as to the following:

- injured or trapped persons needing their help
- highly flammable materials in close proximity to the fire

All fire affected waste will remain isolated until inspected by the Site Manager and approved for reburial.

Waste Operations Administrator - Wayde Peterson 0408-751-199 to report incident to the EPA immediately as per the requirements of the site Environmental Protection License.

### 29.2 Spill of Hazardous Material

For spills of materials that are clearly identified as a low hazard material and where it is clearly within the capability of the person discovering it, immediate action will be taken by this person to ensure that the following steps are taken;

- 1. In a safe manner, isolate the source of the spill.
- 2. Contain the (spills kits provided) from spreading or reaching drainage systems.
- 3. Identify the spilled material and contact the Site Manager for instructions regarding handling of the spill and cleanup procedures

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

Page 40 of 65

After this initial containment the Site Manager will immediately be contacted to review containment and clean up procedures or where it is beyond the capacity of the person discovering the spill to contain it so that the responsible person can allocate appropriate resources or obtain expert technical advice on how to appropriately contain and cleanup the material so that there is no risk to health, safety or the environment.

**Waste Operations Administrator - Wayde Peterson 0408-751-199** to report incident to the EPA immediately as per the requirements of the site Environmental Protection License.

### 29.3 Escape of Leachate from site

Provide effective response to emergency situations involving the discharge of waste or Leachate. As with any emergency response, these procedures must be implemented in a timely fashion to minimize the impact of the incident. This response must be undertaken by qualified individuals, experienced in emergency response for spills to flowing water

Although unlikely, it is possible through human error, an accident or force of nature, that leachate or waste could enter the stormwater system. This may include situations involving:

- damage to the leachate collector;
- a large storm event

The following procedures should be followed when an accident occurs that has caused, or is likely to cause, leachate or waste to enter the stormwater. As with any emergency response, these procedures must be implemented in a timely fashion to minimize the impact of the incident. This response must be undertaken by qualified individuals, experienced in emergency response for spills to flowing water.

### Containment

When safe to do so, stop or contain the source of the discharge. This may involve the construction of temporary berms and trenches.

- The groundwater monitoring program is designed to detect changes in the groundwater regime which could be attributed to the operations of the depot. Given the nature of the groundwater movement, it is unlikely that such a situation would develop without considerable forewarning.
- In the event that the monitoring results indicate that there is leakage of material from the depot, experts will be engaged to devise appropriate response strategies which will be implemented after approval by the Waste Operations Administrator – Wayde Peterson 0408-751-199, Details of staff responsibilities and responses will be determined at that time.

Waste Operations Administrator - Wayde Peterson 0408-751-199 to report incident to the EPA immediately as per the requirements of the site Environmental Protection License.

### 29.4 Emission of Gas from the Landfill

There is a risk of the build-up of hazardous

landfill gas which contains methane and which may ignite and explode under certain circumstances. A response will be required in the event of:

- · ~ Elevated levels of gas being detected by presence of gas odour;
- ~ Elevated levels of gas being detected by the Automatic Monitoring System;
- ~ Fire or explosion.
  - Gas emissions from the landfill would most likely be gradual and unlikely to reach dangerous levels. However, if a gas leak from the landfill is detected, the Chief Warden will ensure that personnel are kept clear until expert advice is obtained.
  - Where there is a need to work in proximity to the leaking area, air fed respiratory equipment shall be used - if there is a gas build-up, it may cause oxygen depletion.
  - In the event that gas is detected being emitted from the landfill, the Chief Warden shall:
    - evacuate all personnel not directly involved in the operation
    - prepare to control any fire that may result
    - ensure that any person needing to enter the proximity of the leak is wearing air-fed respiratory equipment.

Page 42 of 65

### 30. External Emergencies – Code Brown

Below are some examples of the types of external emergencies that could be relevant for Glengarry Cottage together with the planned response. It may be necessary to add additional scenarios in the future in accordance with changing circumstances.

- Bushfire, Shrub or Grass Fire
- Earthquake
- Explosion Emissions (from adjoining industries)
- Toxic Emissions or substance spill (from adjoining industries)
- Flooding (entry and exit roads)
- Transport Incident on Road or Railway Track
- o Adverse weather conditions eg
  - Severe winds
  - Storm surges
  - Lightning
  - Cyclone
  - Tsunami
- Substance spill from industry or traffic accident eg
  - Gas or other Dangerous Good
  - Hazardous Substance
  - Biological
  - Radiological
  - Nuclear
  - Toxic Emissions

### 30.1 BUSHFIRE, SHRUB OR GRASS FIRE

In the event of a bushfire or shrub or grass fire -

- Maintain your personal safety and of those persons around you at all times during the emergency event.
- DO NOT evacuate the building unless directed to do so by the Chief Warden or in their absence, the attending Emergency Services.
- Close all windows and doors and shutters.
- Report the emergency to the Chief Warden and your immediate supervisor/manager and await instruction.
- If possible contact any workers who are expected to arrive at the facility and inform them to stay away from the facility until advised that it is safe.
- Be aware that there may be wildlife in your path or in the area eg snakes, deer that may be trying to get away from the fire.

Contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** from a mobile (or text message to **106**). In a clear and calm voice state:

Page 43 of 65

Adoption Date	01/09/2012	Version	01
Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012

- Emergency service required Fire Brigade/Ambulance/Police
- Type of emergency –
- Your name
- Location of emergency Whytes Gully Waste Resource Recovery Park
  Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when they attend the facility
- Be prepared to answer any questions the emergency operator asks you
- Wait on line until the emergency operator tells you to hang up

### **30.2 EARTHQUAKE**

In the event of an earthquake occupants should not attempt to run from the facility. Occupants are advised to remain where they are until such time as the earthquake subsides. Basic guidelines to remember in the event of an earthquake are:

- Try to remain calm.
- Move away from windows and exterior walls.
- Try to keep away from mirrors, light fittings, shelves, bookcases and any other furniture that may fall or slide during the quake.
- If possible take cover under a desk or move to an internal corner of a room, sit down and protect your face and head by placing your hands over them.
- Once the tremor has stopped, look around for injured persons and provide assistance if it is safe to do so.
- In a minor event/ tremor the occupants should remain in the building until further instructed by the Chief Warden.
- In a major event/ tremor where substantial building movement occurs evacuate the cottage in accordance with stage (3) Evacuation Procedures. All occupants of the facility are to leave the building once instructed to do so by the Chief Warden or his representative. Persons are to attend the nominated assembly area which is the main entry front gates or to the alternate assembly area gate entry to Glengarry Cottage (south side of Transfer station) for roll call.

Contact emergency services by dialling **[0-000]** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** from a mobile (or text message to **106**). In a clear and calm voice state:

- Emergency service required Fire Brigade/Ambulance/Police
- Type of emergency –
- Your name
- Location of emergency Whytes Gully Waste Resource Recovery Park
  Reddalls Road, Kembla Grange
- Nearest cross street West Dapto Road, Kembla Grange
- Details of any action undertaken
- Number of casualties and any information about the casualties (if applicable)
- Any other hazards that the emergency services could encounter when they attend the facility

- Be prepared to answer any questions the emergency operator asks you
- Wait on line until the emergency operator tells you to hang up

### **30.3** EXPLOSION OR INDUSTRIAL INCIDENT

In the event of an external explosion ie at Glengarry Cottage or nearby industrial sites, occupants are to:

- Remain calm.
- Stay in the building.
- Close all windows and doors and if necessary shutters.
- Remove persons from the immediate threat if safe to do so
- If safe Isolate the immediate area
- If safe, prevent access to the affected area
- If safe, Isolate the area using tape
- Notifying your immediate supervisor and the Chief Warden and await their instructions.
- If required contact emergency services by dialling **0-000** or from a mobile by dialling the primary emergency number **000** or secondary emergency number **112** from a mobile (or text message to **106**). In a clear and calm voice state:
  - Emergency service required Fire Brigade/Ambulance/Police
  - Type of emergency –
  - Your name
  - Location of emergency Whytes Gully Waste Resource Recovery Park – Reddalls Road, Kembla Grange
  - Nearest cross street West Dapto Road, Kembla Grange
  - Number of casualties and any information about the casualties (if applicable)
  - Any other hazards that the emergency services could encounter when they attend the facility
  - Be prepared to answer any questions the emergency operator asks you
  - Wait on line until the emergency operator tells you to hang up

### 31. Facility Emergency Safety Rules

The following safety rules must be adhered to in the event of an emergency by all workers and/or occupants of this facility

- Remain calm and not shout out.
- No person is to re-enter the facility once they have exited.
- Re-entry to the facility can only occur once the **all clear** has been given by the Chief Warden or the Officer in Charge of the attending Emergency Service.
- In the event of a fire evacuation workers must NOT:
  - Lock doors as they exit and/or
  - o Turn off lights
- Workers must not take unnecessary risks
- All facility workers must have easy access to the Council's Emergency Procedure Guide "flip chart"
- Fire fighting equipment must not be obstructed at any time for any reason
- Designated paths of egress must be free from obstructions at all times
- Emergency exit doors must be free from obstructions at all times
- Designated Fire and/or Smoke doors must not be chocked open or obstructed at anytime
- Assist LECO where assistance has been requested
- No bulky items or things such as food and drink are to be carried in an evacuation

### 32. Fire Fighting Equipment and Emergency Safety equipment

Whytes Gully has emergency equipment that can be utilised in the event of an emergency.

The following is a list of the types of fire fighting equipment (FFE) that are located throughout the facility:

- Water (red) for use on ordinary combustibles or free burning materials such as paper, clothing wood textiles
- Carbon Dioxide CO2 (red with black band) Flammable liquids electrically energised fires and for use on burning materials such as paper, clothing, wood, textiles, liquids, petrol, oils, greases etc
- Dry Chemical (red with white band) for general use including ordinary combustibles flammable gases and liquids and electrically energised fires
- Wet Chemical (red with oatmeal band) for use on cooking oils and fats
- Foam (red with blue band) to be used on ordinary combustibles and flammable liquids
- Hose Reels DO NOT use on electrical fires
- **Fire Blankets** for use on fires involving flammable liquids in cooking containers

The following is a list of the types of emergency safety and equipment that are located throughout the facility:

- Smoke detectors
- Emergency lighting
- Exit signs
- Fire hydrants
- Fire isolated compartments i.e. Fire doors
- Smoke isolated compartments ie Smoke doors
- Emergency exits
- First Aid provisions ie kits, rooms etc

### NOTE:

- All occupants of this facility must be able to identify and locate Fire Fighting Equipment and where necessary occupants will be required to identify and locate emergency safety equipment.
- Never use water on an electrical fire, if in doubt always use the CO2 as the first choice of FFE
- Where possible, turn off the energy source or the fire's fuel source prior to attempting to attack the fire. Only do this if it is safe to do so.
- Only use FFE when it is safe to do. The five safety rules when dealing with a fire are:
  - 1. Is the fire small enough for me to manage it?
  - 2. Make sue that I tell someone about the fire ie person/s within the immediate area, an emergency warden and/or the Emergency Services
  - 3. Do not fight fire on your own have someone with you to watch your back.
  - 4. Check the FFE before using it. Consider:
    - Is the right FFE for the type of fire?

Document Owner	Wayde Peterson - Waste Operations Administrator	Issue & Currency Date	.1/09/2012
Document Name	Emergency Procedures Plan for Whytes Gully	Review Date	01/08/2015

### • Does it work?

- 5. Am I trained and confident enough to use the FFEIf in doubt get out and close the door/s behind you as you leave.

# 36 Emergency Response Plan – Whytes Gully EMERGENCY RESPONSE PLAN – WHYTES GULLY WASTE DEPOT

# IF YOU HEAR AN ALARM OR ARE IN IMMEDIATE DANGER

- Evacuate immediate work area via nearest exit and proceed to the nominated Assembly Area
- NOMINATED ASSEMBLY AREA:
  - 1. Front Entry Gates
  - 2. Entry to Glengarry (south side of transfer station)

### THEN YOU MUST

- Telephone emergency services by dialling the primary emergency contact number (using a landline dial '0' 000 (or secondary contact by dialling 112 mobile only or text a message from a mobile to 106. 000 (or mobile 112)
- In a clear and calm voice state:
  - Type of emergency
  - Your name
  - Location of emergency Whytes Gully Waste Resource Recovery Park, Reddalls Road, Kembla Grange
  - Nearest cross street West Dapto Road, Kembla Grange
  - o Details of any action already taken at site
  - Number of casualties (if any)
  - Any information about the casualties
  - Any other hazards in the area
  - Be prepared to answer any questions the emergency operator asks you
  - Wait on line until the emergency operator tells you to hang up
- In all cases advise Wayde Peterson 0418 713 531

If after hours ring the WCC After Hours Duty Officer

# 4227 7111 (Primary)

# 1300 557 980 (Secondary)

# FOR YOUR OWN SAFETY, IN THE EVENT OF AN EMERGENCY :

- Do not re-enter site until advised to do so by the Officer In Charge of the attending emergency services.
- Make sure you know the location of your nearest exits
- Do not take any unnecessary risks
- Do not talk to the media
- Await further instructions from Site/Project Manager/Supervisor.
